

Chapter 11 → Nucleic Acid Structure, DNA Replication and Chromosomes

Genetic Material

The genetic material needs to:

- contain info to build + run an entire organism
- be copied accurately
- be transmitted from parent to offspring, cell to cell
- account for known variation w/in + btwn species

determined by series of experiments:

- most believed it would be proteins b/c they were more variable than nucleic acids
- w/in 20 amino acids and 4 nucleotides

Griffith

2 strains of *Streptococcus pneumoniae*

- S killed mice then S bacteria found - established virulence
- injected R - didn't die - bact were killed

Mixed R + heat-killed S → killed mice + live S recovered

- something in S was transferred to R
- this transforming factor = genetic material

Oswald et. Al → more experiments

- treated strain S to kill enzymes + proteins
- S still killed mice (Genetic mat. can't be proteins)
- Lysates treated by nucleases to destroy nucleic acids
- the mice lived (Genetic mat. = nucleic acids)
- pH dependent

Hershey + Chase (nature of gene's demonstration 2)

- used radioactive isotopes in viruses
- discover genes should be found in bacterial cells
- genes do not consist of proteins but nucleic acids
- discovered genes were made of DNA

Structure of Genetic Material

Watson + Crick

used info from Griffith + Oswald + Hershey + Chase

→ double helix w/ sugar-phosphate backbone + bases projecting inward in pairs

Structure of nucleic acids

monomers: **sugars** - phosphate sugar, **nitrogenous base**, phosphate group

NB in purines

NB in Pyrimidines

Base pairing

	RNA	DNA
sugar:	ribose	deoxyribose
bases:	A, C, G, U	A, C, G, T
strands:	1	2

Strands running in opposite directions

Schönborn, 2022-03-15 This book presents a collection of educational research and developmental efforts on the rapidly emerging use of infrared cameras and thermal imaging in science education It provides an overview of infrared cameras in science education to date and of the physics and technology of infrared imaging and thermography It discusses different areas of application of infrared cameras in physics chemistry and biology education as well as empirical research on students interaction with the technology It ends with conclusions drawn from the contributions as a whole and a formulation of forward looking comments **The Pearson CSAT Manual 2011** Edgar Thorpe, Showick Thorpe, **Genetics in the Madhouse** Theodore M. Porter, 2018-06-05 The untold story of how hereditary data in mental hospitals gave rise to the science of human heredity In the early 1800s a century before there was any concept of the gene physicians in insane asylums began to record causes of madness in their admission books Almost from the beginning they pointed to heredity as the most important of these causes As doctors and state officials steadily lost faith in the capacity of asylum care to stem the terrible increase of insanity they began emphasizing the need to curb the reproduction of the insane They became obsessed with identifying weak or tainted families and anticipating the outcomes of their marriages Genetics in the Madhouse is the untold story of how the collection and sorting of hereditary data in mental hospitals schools for feeble minded children and prisons gave rise to a new science of human heredity In this compelling book Theodore Porter draws on untapped archival evidence from across Europe and North America to bring to light the hidden history behind modern genetics He looks at the institutional use of pedigree charts censuses of mental illness medical social surveys and other data techniques innovative quantitative practices that were worked out in the madhouse long before the manipulation of DNA became possible in the lab

Porter argues that asylum doctors developed many of the ideologies and methods of what would come to be known as eugenics and deepens our appreciation of the moral issues at stake in data work conducted on the border of subjectivity and science A bold rethinking of asylum work Genetics in the Madhouse shows how heredity was a human science as well as a medical and biological one **Study Guide** Pearson, Jeanne Ellis Ormrod, 2005-11-21 **Study Guide, with PowerPoint Lecture Outlines, for Henslin Sociology, a Down-to-earth Approach, Ninth Edition** Shelly Dutchin, 2009

Disputed Inheritance Gregory Radick,2023-08-18 A root and branch rethinking of how history has shaped the science of genetics In 1900 almost no one had heard of Gregor Mendel Ten years later he was famous as the father of a new science of heredity genetics Even today Mendelian ideas serve as a standard point of entry for learning about genes The message students receive is plain the twenty first century owes an enlightened understanding of how biological inheritance really works to the persistence of an intellectual inheritance that traces back to Mendel s garden Disputed Inheritance turns that message on its head As Gregory Radick shows Mendelian ideas became foundational not because they match reality little in nature behaves like Mendel s peas but because in England in the early years of the twentieth century a

ferocious debate ended as it did On one side was the Cambridge biologist William Bateson who in Mendel's name wanted biology and society reorganized around the recognition that heredity is destiny On the other side was the Oxford biologist W F R Weldon who admiring Mendel's discoveries in a limited way thought Bateson's Mendelism represented a backward step since it pushed growing knowledge of the modifying role of environments internal and external to the margins Weldon's untimely death in 1906 before he could finish a book setting out his alternative vision is Radick suggests what sealed the Mendelian victory Bringing together extensive archival research with searching analyses of the nature of science and history Disputed Inheritance challenges the way we think about genetics and its possibilities past present and future The Self-Assembling Brain Peter Robin Hiesinger, 2022-12-13 In this book Peter Robin Hiesinger explores historical and contemporary attempts to understand the information needed to make biological and artificial neural networks Developmental neurobiologists and computer scientists with an interest in artificial intelligence driven by the promise and resources of biomedical research on the one hand and by the promise and advances of computer technology on the other are trying to understand the fundamental principles that guide the generation of an intelligent system Yet though researchers in these disciplines share a common interest their perspectives and approaches are often quite different The book makes the case that the information problem underlies both fields driving the questions that are driving forward the frontiers and aims to encourage cross disciplinary communication and understanding to help both fields make progress The questions that challenge researchers in these fields include the following How does genetic information unfold during the years long process of human brain development and can this be a short cut to create human level artificial intelligence Is the biological brain just messy hardware that can be improved upon by running learning algorithms in computers Can artificial intelligence bypass evolutionary programming of grown networks These questions are tightly linked and answering them requires an understanding of how information unfolds algorithmically to generate functional neural networks Via a series of closely linked discussions fictional dialogues between researchers in different disciplines and pedagogical seminars the author explores the different challenges facing researchers working on neural networks their different perspectives and approaches as well as the common ground and understanding to be found amongst those sharing an interest in the development of biological brains and artificial intelligent systems **The Complete Guide to the ABC Molecular Biology Certification Exam** Tiffany Roy, 2020-04-03 In 2009 the National Academy of Sciences NAS authored the report Strengthening Forensic Science in the United States A Path Forward In it the Committee expressed the need for accreditation and certification Accreditation long recognized by public labs as an important benchmark in quality was recognized as an important way to standardize laboratories that provide forensic services Certification can play an important role as a method of oversight in the forensic sciences something also recommended by the National Commission on Forensic Science in October 2014 The Complete Guide to the ABC's Molecular Biology is a professional certification examination preparation text for forensic

scientists taking the American Board of Criminalistics Examination in Molecular Biology The book serves as a resource for forensic scientists who are facing more and more pressure to become certified to support them in their pursuit of forensic certification In the years since the NAS report was published there has been increased discussion of forensic certification requirements ABC s Molecular Biology exam is a quality certification and learning the concepts for it will invariably help any professional working in the field The book prepares readers in all relevant topic areas including accreditation safety biological screen principles anatomy and cell biology crime scene and evidence handling concepts in genetics biochemistry statistics DNA evidence and DNA testing The book will be particularly helpful for forensic science laboratory technicians police and investigations professionals forensic serology and DNA analysts attorneys and forensic science students This study guide follows the guidelines for the exam and presents all the information necessary to prepare individuals to pass the exam

Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work R C Lewontin *The Genetic Basis of Evolutionary Change* Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge s *Contribution to the Philosophy of Science* in L W Sumner J G Slater and F Wilson eds *Pragmatism and Purpose Essays in Honour of T A Goudge* 1964 University of Toronto Press reproduced here in part by kind permission of all the editors and the publisher

Conducting Systematic Reviews in Sport, Exercise, and Physical Activity David Tod, 2019-08-29 This book offers a conceptual and practical guide to the systematic review process and its application to sport exercise and physical activity research It begins by describing what systematic reviews are and why they assist scientists and practitioners Providing step by step instructions the author leads readers through the process including generation of suitable review questions development and implementation of search strategies data extraction and analysis theoretical interpretation and result dissemination *Conducting Systematic Reviews in Sport Exercise and Physical Activity* clarifies several common misunderstandings including the difference between qualitative systematic reviews and meta analyses Each chapter begins with a set of learning objectives focused on practical application illustrated with examples from reviews published within the

sport exercise and physical activity fields Once a reader has completed all the learning activities along the way they will have designed a systematic review and have written a protocol ready for registration The book ends with a collection of advice from internationally regarded scientists with substantial experience in systematic reviews
