The Synapse (page 100)

11. Circle the letter of the term that refers to the location at which a neuron can transfer an impulse to another cell.
 - a. axon
 - b. dendrite
 - ☒ c. synapse
 - d. node
12. What are neurotransmitters? *Neurotransmitters are chemicals that are used by a neuron to transmit an impulse across a synapse to another cell.*
13. Describe what happens when an impulse arrives at an axon terminal.

The sacs release neurotransmitters into the synaptic cleft. The neurotransmitters diffuse across the synaptic cleft and attach to receptors on the membrane of the neighboring cell, causing positive ions to rush across the cell membrane and stimulate the second cell.

Reading Skill Practice

When you read about a complex process, representing the process with a diagram can help you understand it better. Make a diagram to show how a nerve impulse is transmitted from one cell to another. Do your work on a separate sheet of paper.

Students' diagrams should be similar to Figure 35-8. Their diagrams should be labeled to show the relevant parts of the cells and the direction of the nerve impulse.
