Hsu, 2021-11-17 Written by experts that include originators of some key ideas chapters in the Handbook of Multiple Testing cover multiple comparison problems big and small with guidance toward error rate control and insights on how principles developed earlier can be applied to current and emerging problems Some highlights of the coverages are as follows Error rate control is useful for controlling the incorrect decision rate Chapter 1 introduces Tukey's original multiple comparison error rates and point to how they have been applied and adapted to modern multiple comparison problems as discussed in the later chapters Principles endure While the closed testing principle is more familiar Chapter 4 shows the partitioning principle can derive confidence sets for multiple tests which may become important as the profession goes beyond making decisions based on p values Multiple comparisons of treatment efficacy often involve multiple doses and endpoints Chapter 12 on multiple endpoints explains how different choices of endpoint types lead to different multiplicity adjustment strategies while Chapter 11 on the MCP Mod approach is particularly useful for dose finding To assess efficacy in clinical trials with multiple doses and multiple endpoints the reader can see the traditional approach in Chapter 2 the Graphical approach in Chapter 5 and the multivariate approach in Chapter 3 Personalized precision medicine based on targeted therapies already a reality naturally leads to analysis of efficacy in subgroups Chapter 13 draws attention to subtle logical issues in inferences on subgroups and their mixtures with a principled solution that resolves these issues This chapter has implication toward meeting the ICH E9 R1 Estimands requirement Besides the mere multiple testing methodology itself the handbook also covers related topics like the statistical task of model selection in Chapter 7 or the estimation of the proportion of true null hypotheses or in other words the signal

prevalence in Chapter 8 It also contains decision theoretic considerations regarding the admissibility of multiple tests in Chapter 6 The issue of selected inference is addressed in Chapter 9 Comparison of responses can involve millions of voxels in medical imaging or SNPs in genome wide association studies GWAS Chapter 14 and Chapter 15 provide state of the art methods for large scale simultaneous inference in these settings

*Glial Cells: Managers of Neuro-immunity* Carlos Barcia,Gilles J. Guillemin,James F. Curtin,Jeffrey M. Zirger,2016-05-30 Immune responses within the brain are still scarcely explored Nerve tissue damage is accompanied by the activation of glial cells primarily microglia and astroglia and such activation is responsible for the release of cytokines and chemokines that maintain the local inflammatory response and actively recruit lymphocytes and monocytes to the damaged areas Theoretically these responses are designed to repair the brain damage However alterations or a chronic perpetuation of these responses may underlie a number of neuro pathologies It is thought that each inflammatory scenario within the brain have a specific biochemical footprint characterized by the release of determined cytokines chemokines and growing factors able to define particular immunological responses Alongside glial cells transform their cell body become larger and develop higher number of branches adopting an active morphological phenotype These changes are related with the search of interactions with other cells such as bystander resident cells of the brain parenchyma but also cells homing from the blood stream In this process microglia and astrocytes communicates with other cells by the formation of specific intercellular

connections that are still poorly understood These interactions are complex and entail the arrangement of cytoskeletal compounds secretory and phagocytic domains In this particular crosstalk there is a two way communication in which glial cells and target cells come together establishing interfaces with specific information exchange This way glial cells orchestrate the particular response recruiting cellular subsets within the central nervous system and organizing the resolution of the brain damage In this Frontiers Research Topic we compile a selection of articles unfolding diverse aspects of glial derived inflammation focused on neurodegenerative diseases and other nervous system disorders with special emphasis on microglia macrophages as leading actors managing neuro immunity
