

The Statistics of Inheritance

How can statistics help predict the traits of offspring?

Why?

The randomization of alleles from the parents' genetic material is essential to the survival and evolution of a species. If the combinations of alleles that make up the genetic material in a zygote are truly random, the laws of statistics can be used to predict what traits the offspring will have. This activity starts with a review of Punnett squares, which is one way to make predictions about simple allele combinations. Statistics will then be used to make mathematical predictions about the genotypes of offspring.

- Consider the beetle species in Model 1.
 - How many phenotypes for exoskeleton color are exhibited in the population? What are they?
 - How many genotypes for exoskeleton color are exhibited in the population? What are they?
- According to Model 1, which allele, B or b, is the dominant exoskeleton color allele? Justify your answer with specific evidence from Model 1.
- The Punnett squares in Model 1 show the possible outcomes for an offspring resulting from the mating of two beetles.
 - Which Punnett square shows a cross between two homozygous beetles?
 - Which Punnett square shows a cross between a heterozygous beetle and a homozygous recessive beetle?
- Briefly describe how the genotypes inside of the Punnett squares representing the possible outcomes for an offspring are determined.
- Complete the Punnett square for cross D in Model 1. Include drawings to show the phenotypes possible for the offspring that would result.
- Refer to Model 1.
 - In which of the crosses is there a 100% chance that the beetle offspring will have a black exoskeleton?
 - In which of the crosses is the probability 0.75 that the beetle offspring will have a black exoskeleton?
- For cross D in Model 1, what is the probability that the beetle offspring will have a Bb genotype? Show a mathematical calculation to support your answer.

Inheritance and Wealth Inequality in Britain Colin Harbury, David Hitchens, 2012-11-12 Modern Britain is characterised by marked inequalities in the distribution of wealth which continue to fuel controversy and arouse strong if adverse feelings Originally published in 1979 Inheritance and Wealth Inequality in Britain provides detailed evidence on the relative importance of inherited and self made wealth It is the first major work in the field since Wedgwood s pioneering study in 1929 and represents a major contribution to current debates on justice and inequality The study is based on more than fifteen years of detective work on successive generations of the wealthy Professors Harbury and Hitchens have searched through the public records of registered wills contacted relatives executors and solicitors and have even tramped through graveyards in order to build up their picture of how wealth is actually transmitted from generation to generation Results of this research challenge the commonly held view that inheritance is no longer a main force in the perpetuation of wealth and demonstrate unquestionably that it remains a factor of paramount importance The book helps to answer such questions as what proportion of wealthy men and wealthy women are self made Do the rich tend to marry the rich Which industries tend to favour self made as against inherited wealth What are the chances today of inheriting or dissipating a fortune Inheritance and Wealth Inequality in Britain is essential reading for those academically and professionally concerned with policymaking on income and wealth distribution and with the tax system and to students taking courses in welfare economics public finance and the sociology of class It is also an important contribution to the history of modern Britain *Statistics of Income*, 1968 **Parliamentary Debates (Hansard)**. Longford, 2014-07-07 There is no shortage of incentives to study and reduce poverty in our societies Poverty is studied in economics and political sciences and population surveys are an important

source of information about it The design and analysis of such surveys is principally a statistical subject matter and the computer is essential for their data compilation and processing Focusing on The European Union Statistics on Income and Living Conditions EU SILC a program of annual national surveys which collect data related to poverty and social exclusion Statistical Studies of Income Poverty and Inequality in Europe Computing and Graphics in R presents a set of statistical analyses pertinent to the general goals of EU SILC The contents of the volume are biased toward computing and statistics with reduced attention to economics political and other social sciences The emphasis is on methods and procedures as opposed to results because the data from annual surveys made available since publication and in the near future will degrade the novelty of the data used and the results derived in this volume The aim of this volume is not to propose specific methods of analysis but to open up the analytical agenda and address the aspects of the key definitions in the subject of poverty assessment that entail nontrivial elements of arbitrariness The presented methods do not exhaust the range of analyses suitable for EU SILC but will stimulate the search for new methods and adaptation of established methods that cater to the identified purposes

Closing the tax gap Great Britain: Parliament: House of Commons: Treasury Committee, 2012-03-09 This Treasury Committee report considers HM Revenue Customs' past work in ensuring tax compliance and concludes that while progress has been made, there is still work to be done. HMRC defines the tax gap as the difference between tax collected and the tax that should be collected: the theoretical liability. The theoretical tax liability represents the tax that would be paid if all individuals and companies complied with both the letter of the law and HMRC's interpretation of the intention of Parliament in setting law, referred to as the spirit of the law. Enabling voluntary compliance is the most efficient way of closing the tax gap, and HMRC must ensure that all those who wish to comply with their tax obligations are able to do so. Part of the process of encouraging voluntary compliance is demonstrating that HMRC treats all taxpayers fairly, whether they are individuals, small businesses, or large corporations. The tax system should be simplified to make compliance easier. HMRC's recent announcement of ways it intends to improve its processes for settling

tax disputes is a step forward in the context of wider questions needing to be answered about the accountability structures of HMRC HMRC s calculation of the tax gap is flawed and risks focusing the minds of its employees on the wrong task maximising revenue at all cost rather than ensuring that all taxpayers pay the right amount of tax
