Landscape Simulation Modeling Robert Costanza, Alexey Voinov, 2006-06-02 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity The books in this series will promote this revolution in systems thinking by integrating computational skills of numeracy and techniques of dynamic modeling into a variety of disciplines The unifying theme across the series will be the power and simplicity of the model building process and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them Modeling Dynamic Systems does not endorse any particular modeling paradigm or software Rather the volumes in the series will emphasize simplicity of learning expressive power and the speed of execution as priorities that will facilitate deeper system understanding

Management of Irrigation and Drainage Systems Hector M. Malano, Paul van Hofwegen, 2018-05-02 This monograph provides an overview of the principles required for a service orientation in the management of irrigation and drainage systems. The material covered is designed to emphasize an area largely neglected in the irrigation and drainage management literature. The dominating philosophy underlying this book

is that irrigation and drainage systems must be managed as a service business responsive to the needs and changing requirements of its customers. It is postulated that this service approach to the management of irrigation and drainage systems constitutes a key element of the strategy that is needed to improve the current level of performance of many irrigation and drainage systems worldwide. Enhanced performance of irrigation is a prerequisite if we are to face the enormous challenge of producing greater quantities of food to meet the demand of a growing population. This is particularly the case in an environment with increasing competition for water from industry and urban water users set against mounting concerns about environmental sustainability.

The Beauty of the Flower Stephen A. Harris, 2023-08-25 Blooming with rare archival images the story of scientific botanical illustrations over nearly seven hundred years. In a world flooded with images designed to create memories, validate perceptions and influence others, botanical illustration is about something much more focused: creating technically accurate depictions of plants. Reproductions of centuries-old botanical illustrations frequently adorn greeting cards, pottery and advertising to promote heritage or generate income, yet their art is scientific, intended to record, display and transmit scientific data. *The Beauty of the Flower* tells the backstory of these images, showing us how scientific botanical illustrations are collaborations among artists, scientists and publishers. It explores the evolution and interchanges of these illustrations since the mid-fifteenth century, how they have been used to communicate scientific ideas about plants and how views of botanical imagery change. Featuring unique images rarely seen outside of specialist literature, this book reveals the fascinating stories behind these remarkable illustrations.
