

LS1. From Molecules to Organisms: Structures and Processes

HS-LS1-1. Construct a model of transcription and translation to explain the roles of DNA and RNA that code for proteins that regulate, carry out essential functions of life.

Clarification Statement:

- Proteins that regulate and carry out essential functions of life include enzymes (which speed up chemical reactions), structural proteins (which provide structure and enable movement), and hormones and receptors.
- The model should show the double-stranded structure of DNA, including genes as segments of DNA. The model should show how complementary bases on the non-transcribed strand. *State Assessment Boundary:*
- Specific names of proteins or specific steps of transcription and translation are not required.
- Cell structures involved in transcription and translation are not required.

HS-LS1-2. Develop and use a model to illustrate the flow of matter and energy that support growth and transport through the body. (A) model of the body and its parts, and (B) model of the processes that support growth and transport through the body.

Clarification Statement:

- Emphasis is on the primary processes that support growth and transport through the body, such as the mouth, stomach, small intestine (digestion), large intestine (absorption), heart, blood vessels (circulation), lungs (respiration), and excretory system (excretion).

State Assessment Boundary:

- The model should not include details such as the structure of the organs, or the identification of specific molecules or cells.
- The model should illustrate how the body maintains stable internal conditions through both body-wide feedback mechanisms and local feedback mechanisms. Examples include the prevention of a stimulus through positive feedback (e.g., injured tissues releasing chemicals in the blood that activate platelets to facilitate blood clotting), and the reduction of stimulus through negative feedback (e.g., insulin releasing high blood glucose to normal levels).
- Other processes include (a) passive transport and active transport of materials across the cell membrane to maintain specific concentrations of water and other contents in the cell and (b) the role of lysosomes in recycling wastes, macromolecules, and cell parts into monomers. *State Assessment Boundary:*
- Interactions at the molecular level (for example, how insulin is produced) are not required in state assessment.
