

Chapter 1

Chapter 1 Project Worksheet 1 (p. 6)

Students' data tables and graphs will vary somewhat. In general, eggs will increase in size when they soak in vinegar and plain water, and they will decrease in size when they soak in liquids that have a lower concentration of water, such as salt water.

Chapter 1 Project Worksheet 2 (p. 7)

Column 4 in the table should read: 70 percent (liquid A); 92 percent (liquid B); 87 percent (liquid C); 79 percent (liquid D)

1. Liquids A and D would cause the cell to lose water; liquids B and C would cause the cell to take in water.
2. Possible answers might include shampoo, syrup, ketchup, or honey.

Section 1-1 Review and Reinforce (p. 11)

1. Hooke
2. First person to observe bacteria
3. Schleiden
4. Concluded that all animals are made up of cells
5. Virchow
6. Magnification and resolution are both important properties of a microscope. Magnification is the ability to increase how large an object appears, whereas resolution is the ability to bring the details of the object into focus.
7. An electron microscope uses electrons instead of light to magnify an object, and it can view an object with much greater magnification and resolution than a light microscope.
8. Cells are the basic unit of structure and function in living things, and all living things are composed of cells.
9. b
10. e
11. d
12. c
13. a
14. g
15. f

Section 1-1 Enrich (p. 12)

1. Transmission electron microscopes (TEM) and transmission positron microscopes (TPM) both use beams of atomic particles to view specimens. However, the TPM uses beams of positrons, which do not harm living things, whereas the TEM uses beams of electrons, which living things cannot withstand. Therefore, unlike the TEM, the TPM can be used to view living specimens.
2. Acoustic microscopes bounce high-frequency sound waves off an object. The echoes of the sound waves are then translated onto a screen as a microscopic image.
3. Transmission positron microscopes and acoustic microscopes can be used to view cells that are still alive and functioning. Electron microscopes, on the other hand, can be used to view only cells that are no longer alive.

Section 1-2 Review and Reinforce (p. 15)

1. cytoplasm
2. endoplasmic reticulum
3. nucleus
4. mitochondrion
5. cell membrane
6. Organelles
7. cell wall
8. cell membrane

Disputed Inheritance Gregory Radick,2023-08-18 A

root and branch rethinking of how history has shaped the science of genetics In 1900 almost no one had heard of Gregor Mendel Ten years later he was famous as the father of a new science of heredity genetics Even today Mendelian ideas serve as a standard point of entry for learning about genes The message students receive is plain the twenty first century owes an enlightened understanding of how biological inheritance really works to the persistence of an intellectual inheritance that traces back to Mendel s garden Disputed Inheritance turns that message on its head As Gregory Radick shows Mendelian ideas became foundational not because they match reality little in nature behaves like Mendel s peas but because in England in the early years of the twentieth century a ferocious debate ended as it did On one side was the Cambridge biologist William Bateson who in Mendel s name wanted biology and society reorganized around the recognition that heredity is destiny On the other side was the Oxford biologist W F R Weldon who admiring Mendel s discoveries in a limited way thought Bateson s Mendelism represented a backward step since it pushed growing knowledge of the modifying role of environments

internal and external to the margins Weldon's untimely death in 1906 before he could finish a book setting out his alternative vision is Radick suggests what sealed the Mendelian victory Bringing together extensive archival research with searching analyses of the nature of science and history Disputed Inheritance challenges the way we think about genetics and its possibilities past present and future Biological Science Freeman, Scott Freeman, Warren W. Burggren, 2002-03 By Warren Burggren University of North Texas Jay Brewster Pepperdine University Laurel Hester South Carolina Governor's School for Science and Mathematics Rather than repeat what is covered in the textbook the Student Study Guide will help students study biology and think like a scientist Introductory chapters on Data Interpretation Looking for Relationships Experimentation and Writing will be illustrated and developed for the student Each text chapter will then be covered with the goal of reinforcing the ideas mentioned in introductory chapters and to tie them to appropriate topics within a chapter
