Classification and Modeling with Linguistic Information Granules Hisao Ishibuchi,Tomoharu Nakashima,Manabu Nii,2006-02-27 Many approaches have already been proposed for classification and modeling in the literature These approaches are usually based on mathematical models

Computer systems can easily handle mathematical models even when they are complicated and nonlinear e g neural networks On the other hand it is not always easy for human users to intuitively understand mathematical models even when they are simple and linear This is because human information processing is based mainly on linguistic knowledge while computer systems are designed to handle symbolic and numerical information A large part of our daily communication is based on words We learn from various media such as books newspapers magazines TV and the Internet through words We also communicate with others through words While words play a central role in human information processing linguistic models are not often used in the fields of classification and modeling If there is no goal other than the maximization of accuracy in classification and modeling mathematical models may always be preferred to linguistic models On the other hand linguistic models may be chosen if emphasis is placed on interpretability
