*Subcreation: Fictional-World Construction from J.R.R. Tolkien to Terry Pratchett and Tad Williams*

Stefanie Schult,2017-01-26 The doctoral thesis argues that the term Subcreation with its revised and broadened definition in part differing from J R R Tolkien s original term sub creation may be used for the discussion of the making of fictional worlds in literary discourse The successful conception of a fictional world depends on the reader s willing suspension of disbelief This depends both on the author and his skilled composition of the world and all its aspects as well as on the reader s acceptance of this invented fictional world The author needs to create a narrative with an inner consistency which is crucial to achieving the effect of the reader s immersion in the fictional world The fundamental aspects that an author needs to realize to achieve successful Subcreation have been structured into and analysed in four categories Language and Linguistic Variation Physiopoeia Anthropoeia and Mythopoeia Furthermore this thesis shows that as contemporary examples of fantastic literature both Tad Williams s and Terry Pratchett s fictional worlds are successfully created through the realization of these aspects of Subcreation Apart from commenting on the success of the subcreative process this thesis also remarks upon the cultural influences both authors include in their writings While both may be considered Anglophone in a general categorization Pratchett s Discworld retains a feeling of Britishness that is not to be found in Williams s Otherland The thesis proposes several approaches to Subcreation that may be studied subsequently So for example it may be possible to determine the success of an author s Subcreation by collecting empirical data Apart from literary works this field of studies may also include other media

**Science, Culture and Society** Mark Erickson, 2016-09-12

Science occupies an ambiguous space in contemporary society. Scientific research is championed in relation to tackling environmental issues and diseases such as cancer and dementia and science has made important contributions to today's knowledge economies and knowledge societies. And yet science is considered by many to be remote and even dangerous. It seems that as we have more science we have less understanding of what science actually is. The new edition of this popular text redresses this knowledge gap and provides a novel framework for making sense of science particularly in relation to contemporary social issues such as climate change. Using real world examples Mark Erickson explores what science is and how it is carried out, what the relationship between science and society is, how science is represented in contemporary culture and how scientific institutions are structured. Throughout the book brings together sociology, science and technology studies, cultural studies and philosophy to provide a far reaching understanding of science and technology in the twenty first century. Fully updated and expanded in its second edition, **Science, Culture and Society** will continue to be key reading on courses across the social sciences and humanities that engage with science in its social and cultural context.
