

# The Statistics of Inheritance

How can statistics help predict the traits of offspring?

## Why?

The randomization of alleles from the parents' genetic material is essential to the survival and evolution of a species. If the combinations of alleles that make up the genetic material in a zygote are truly random, the laws of statistics can be used to predict what traits the offspring will have. This activity starts with a review of Punnett squares, which is one way to make predictions about simple allele combinations. Statistics will then be used to make mathematical predictions about the genotypes of offspring.

## Model 1 – Punnett Squares

- Consider the beetle species in Model 1.
  - How many phenotypes for exoskeleton color are exhibited in the population?
  - How many genotypes for exoskeleton color are exhibited in the population?
- According to Model 1, which allele, B or b, is the dominant exoskeleton color allele? Justify your answer with specific evidence from Model 1.
