Singh,2017-04 Wireless communication is one of the most dynamic and vibrant areas of technology development in the communication field today It has been found that severe climatic conditions disturb the propagation of electromagnetic signals at higher frequencies greater than 30 MHz The disturbance is mainly due to molecular absorption by oxygen for frequencies ranging between 60 and 118 GHz and due to water vapour in 22 183 and 325 GHz bands Rain and fog has the most significant impact since the size of the rain drops is of the order of the wavelength of the transmitted signal This results in energy absorption by the rain drops themselves and as a secondary effect energy is scattered by the drops The frequency selective absorption characteristics of the atmosphere can be approximated by a transfer function In most of the practical channels when the signal propagates through the atmosphere the effect of many factors on the signal has to be considered along with the free space propagation channel assumption The main objective of this study is therefore to find out whether and how the different climatic conditions are influencing radio wave propagation in GSM frequency bands in general and in Narnaul Haryana India in particular To carry out this investigation the records of radio wave propagation along with path loss during different climatic conditions have been analyzed On the strength of these analyses a propagation path loss model has been developed by proposing suitable correction factors due to different climatic conditions The validation of this developed path loss model has been verified by taking reference models and by applying practically in different urban areas The effect of these climatic conditions on the link budget has also been analyzed Building Ventilation Mat Santamouris,Peter Wouters,2006-06-01 Ensuring optimum ventilation performance is a vital part of building design Prepared by recognized experts from Europe and the US and published in association with the International Energy Agency s Air Infiltration and Ventilation Centre AIVC this authoritative work provides organized classified and evaluated information on advances in the key areas of building ventilation relevant to all building types Complexities in airflow behaviour climatic influences occupancy patterns and pollutant emission characteristics make selecting the most appropriate ventilation strategy especially difficult Recognizing such complexities the editors bring together expertise on each key issue From components to computer tools this book offers detailed coverage on design analysis and performance and is an important and comprehensive publication in this field Building Ventilation will be an invaluable reference for professionals in the building services industry architects researchers including postgraduate students studying building service engineering and HVAC and anyone with a role in energy efficient building design **Application of Integral Transforms in Mathematical Physics and Engineering** Dr. Sarita Poonia,Dr. Rafia Begum ,Dr. Mahadev Biradar,Dr. G. and Mellin transforms among others With clear explanations and real world examples this book provides a deep understanding of the power and versatility of integral transformations Whether you re a student researcher or practitioner in the fields of mathematics or engineering physics this book is an invaluable resource for understanding and applying integral transformations to a wide range of problems **Computational Science - ICCS 2006** Vassil N. Alexandrov,G. Dick van Albada,Peter M.A. Sloot,J. J. Dongarra,2006-05-12 This is Volume II of the four volume set LNCS 3991 3994 constituting the refereed proceedings of the 6th International Conference on Computational Science ICCS 2006 The 98 revised full papers and 29 revised poster papers of the main track presented together with 500 accepted workshop papers were carefully reviewed and selected for inclusion in the four volumes The coverage spans the whole range of computational science
