Crafting Service Processes Jean Harvey, 2019-03-28 As the title makes clear this book is about the design and delivery of service experiences This includes the design of installations facilities technologies and scripts used in the staging of such experiences It introduces the reader to many fundamental notions in service operations from positioning to execution with much attention paid to human experiences such as those of customers and service workers be they performing simple repetitive tasks or complex mental tasks The subject is treated in an user friendly manner with a storytelling context focusing initially on every day services coffee shops fast food supermarkets and then moving on to complex services lawyers physicians engineers accountants Contrary to popular hype not all service experiences are meant to be memorable If all you need is a cup of coffee and this is done quickly effortlessly and painlessly that s good If there s a little plus along the way that s better you ll make a mental note that this is a good place to stop next time you are in the area In an age of exponential technological change service delivery processes are changing quickly and service industries are being creatively destroyed You want to be the disruptor willing to disrupt a large part of your actual income streams The ability to maintain differentiation rests largely on an in depth understanding of the service experience and operational excellence The future belongs to the fastest learner Intuition is only part of the story

has two main parts just in time and jidoka It is often shown as a house image To improve TPS and keep it running well we use a process called PDCA or the scientific method We do this by doing the same tasks over and over again and making small improvements called kaizen TPS was created by Taiichi Ohno who managed production at Toyota after World War II Ohno began using TPS at Toyota in the 1950s and 1960s starting with machining work Then he started using it in other parts of the company and also shared it with other suppliers in the 1960s and 1970s Outside of Japan the spread of Toyota and General Motors partnership called NUMMI began in California in 1984 The concepts of just in time JIT and jidoka were created before the war A long time ago Sakichi Toyoda created the idea of jidoka and he also started the Toyota group of companies He added a machine to his looms that would stop the loom if a thread broke This improved the quality of things and let people concentrate on more important tasks instead of just checking machines for quality Over time this basic idea became a part of every machine every production line and every Toyota operation Kiichiro Toyoda who is the son of Sakichi and the founder of Toyota came up with the idea of JIT Just in Time in the 1930s He said Toyota should not have too many cars sitting unsold and they should try to work with their suppliers to make the same number of cars all the time Ohno was in charge of making JIT a special system to control how much we make and to avoid making too much TPS was well known after The Machine That Changed the World was published in 1990 This book took five years to make and it was researched by the Massachusetts Institute of Technology The researchers at MIT found that TPS was faster and more efficient than regular mass production It was a very different way of doing things so they called it lean production

Manufacturing Wastes Stream: Toyota Production System Lean Principles and Values Mohammed Hamed Ahmed Soliman, 2022-10-02 In order to cut costs during the economic downturn many businesses are implementing abstinence policies This could mean laying off workers and cutting some wages In fact those actions might only work for a short time Unless the company implements a culture of continuous improvement and alters its method of operation the situation may recur and become even worse This brings us back to the purpose for which the Toyota production system was developed Waste is anything that uses resources but offers the customer nothing in return Most activities are waste or muda and can be divided into two categories Although type one muda does not provide value it is inescapable given the production assets and technologies available today An illustration would be checking welds for safety that type we also call necessary non value added activity Type two muda does not add value and can be quickly eliminated An illustration is a process in a process village with disconnected phases that may be swiftly converted into a cell where unnecessary material moves and inventory are no longer necessary A very small portion of all value stream activities truly generate value as perceived by the client The most effective way to boost business performance is to stop doing the numerous unnecessary things
