The turbine holder, G, Figure 70, is a double plate which holds the turbine in the turbine disc. The holder is retained in position by a flat spring with adjustable tension screws, C. The turbine holder tension spring exerts pressure against the turbine holder, which in turn holds the turbine in the disc under pressure.

The tension spring must be adjusted according to the weight and density of the baits that are produced. When the weights of the baits is increased, the adjusting screw on the bait holder tension spring must be adjusted accordingly.
