### Part 3: Research Tools – Culture from Research

The \_\_\_\_\_ states that when elements are arranged in order of atomic number, their chemical and physical properties tend to \_\_\_\_\_. A \_\_\_\_\_ is a horizontal row of elements, while a \_\_\_\_\_ is a vertical column. Element properties tend to repeat every period so that elements in a group tend to have similar chemical and physical properties. For example, the \_\_\_\_\_ are all soft, harmful in air, react violently with water, form oxides with the formula  $\text{M}_2\text{O}$ , and dissolve with the formula  $\text{M}_2\text{CO}_3$  which are basic compounds that dissolve in water. Elements in a group tend to have the same number of \_\_\_\_\_, while elements in a period have the same number of electrons.

The entire periodic table can be grouped into 3 rough categories of materials. \_\_\_\_\_  
 -Comprise the majority of the elements of the periodic table and are good conductors of heat and electricity and react with acids to form salts. While some may be brittle, like manganese, many tend to be strong ductile
