interdisciplinary effort to investigate the fundamental properties of living systems through the simulation and synthesis of life
like processes The young field brings a powerful set of tools to the study of how high level behavior can arise in systems
governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution
learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and
more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify
theories from dynamical systems game theory evolution computing geophysics and cognition The field has contributed
fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real
