TEACHING & LEARNING ACTIVITY: Introduction RECAP OF GRADE 8 WORK In grade 8 Matter and Materials we learnt about the chemical reactions for the first time. Can you remember the main ideas about chemical reactions? Teacher will ask learners probing questions such as: - What is a chemical reaction? It is a process whereby one set of chemical substances react with each other to form a new set of chemical substances. Chemical reactions occur when elements and/ compounds combine to form new substances. PLEASE NOTE: - A chemical reaction is accompanied by chemical change. - A re-arrangement of atoms occurs to form new products. - The properties of product(s) differ from the original reactants. - No atoms are lost or gained in chemical reactions, they are simply re-arranged – this means that the number of atoms of each type on the left should be equal to the number of atoms of those that are on the right. - What is the difference between reactants and products? Reactants are substances that react with one another whilst products are the new substances that are made during chemical reaction. - What is the meaning of the arrow when writing a chemical equation? (Please inform learners to refrain from using an equal sign when expressing a chemical equation in writing). The teacher explains to the learners that: A chemical equation is the symbolic representation of a chemical reaction in the form of symbols and formulae, wherein the reactant entities are given on the left-hand side and the product entities on the right-hand side.
