Tactile Learning Activities in Mathematics Julie Barnes, Jessica M. Libertini, 2018-08-06 Q What do feather boas cookies and paper shredders have in common A They are all ingredients that have the potential to help your undergraduate students understand a variety of mathematical concepts In this book 43 faculty from a wide range of institutional settings share a total of 64 hands on activities that allow students to physically engage with mathematical ideas ranging from the basics of precalculus to special topics appropriate for upper level courses Each learning activity is presented in an easy to read recipe format that includes a list of supplies a narrative briefly describing the reasons logistics and helpful hints for running the activity and a page that can be used as a handout in class Purchase of the book also includes access to electronic printable versions of the handouts With so many activities it might be hard to decide where to start For that reason there are four indices to help the reader navigate this book a concept index a course index an Author index and a main ingredient index In addition to providing activities for precalculus calculus commonly required mathematics courses for majors and more specialized upper level electives there is also a section describing how to modify many of the activities to fit into a liberal arts mathematics class Whether you are new to using hands on activities in class or are more experienced the Author s hope that this book will encourage and inspire you to explore the possibilities of using more hands on activities in your Historical Modules for the Teaching and Learning of Mathematics Victor J. Katz, Karen Dee classes Bon appetit Michalowiz, 2020-03-02 Contains 11 modules consist of a number of activities designed to demonstrate the use of the history of mathematics in the teaching of mathematics Objectives of the Modules To enable students to develop a much richer understanding of mathematics and its applications by viewing the same phenomena from multiple mathematical perspectives To enable students to understand the historical background and connections among historical ideas leading to the development of mathematics To enable students to see how mathematical concepts evolved over periods of time To provide students with opportunities to apply their knowledge of mathematics to various concrete situations and problems in a historical context To develop in students an appreciation of the history connected with the development of different mathematical concepts To enable students to recognize and use connections among mathematical ideas To enable students to understand how mathematical ideas interconnect and build on one another to produce a coherent whole To lead students to recognize and apply mathematics in contexts outside of mathematics Publisher Computing the Electrical Activity in the Heart Joakim Sundnes, Glenn Terje Lines, Xing Cai, Bjørn Frederik Nielsen, Kent-Andre Mardal, Aslak Tveito, 2007-06-26 The heart is a fantastic machine during a normal lifetime it beats about 2.5 billion times and pumps 200,000 tons of blood through an enormous system of vessels extending 160 000 kilometres throughout the body For centuries man has tried to understand how the heart works but there remain many unsolved problems problems that have captured the attention of thousands of researchers worldwide There is for example a huge amount of research being devoted to the analysis of single

heart cells Other areas of research include trying to understand how it works as a complete muscle and how blood ows through the heart The entire process is extremely complex The history of bioelectricity can be traced back to the late eighteenth century and the experiments of Luigi Galvani A century later in 1887 Augustus Wallers managed to measure the electrical signal generated by the heart at the surface of the body 142 His dog Jimmy earned a place in history by being the rst to have his heart measured in this way see Figure 1 1 In 1903 Willem Einthoven 34 veloped the rst commercial device for recording electrocardiograms ECGs see Figure 1.2 Fractals for the Classroom: Strategic Activities Volume One Heinz-Otto Peitgen, Hartmut Jürgens, Dietmar Saupe, 1991-04-18 This first volume of strategic classroom activities volume 2 is reviewed in the June 1992 SciTech Book News is designed to develop through a hands on approach a basic mathematical understanding and appreciation of fractals The concepts presented include self similarity the chaos game and complexity as it relates to fractal dimension The slide package that accompanies the volume includes some of the highest quality fractal images available Annotation copyrighted by Book News Inc Portland OR Workshop Precalculus Nancy Baxter-Hastings, 2002-02-22 The Workshop Precalculus text is part of the successful Workshop Mathematics Project based at Dickinson College Pennsylvania It combines interactive teaching and collaborative learning such that students become active participants in the learning process In this new text this proven pedagogy is used to cover topics in precalculus linear and quadratic functions and trig functions for example TI-Nspire Strategies: Geometry Aimee L. Pullan, Leo K. Cheng, Martin L. Buist, 2005 This book on modelling the electrical activity of the heart is an attempt to describe continuum based modelling of cardiac electrical activity from the cell level to the body surface the forward problem and back again the inverse problem Background anatomy and physiology is covered briefly to provide a suitable context for understanding the detailed modelling that is presented herein The questions of what is mathematical modelling and why one would want to use mathematical modelling are addressed to give some perspective to the philosophy behind our approach Our view of mathematical modelling is broad it is not simply about obtaining a solution to a set of mathematical equations but includes some material on aspects such as experimental and clinical validation Principles and Practice of Constraint Programming - CP 2002 Pascal Van Hentenryck, 2003-08-02 This book constitutes the refereed proceedings of the 8th International Conference on Principles and Practice of Constraint Programming CP 2002 held in Ithaca NY USA in September 2002 The 38 revised full papers and 6 innovative application papers as well as the 14 short papers presented toghether with 25 abstracts from contributions to the doctoral program were carefully reviewed and selected from 146 submissions All current issues in constraint processing are addressed ranging from theoretical and foundational issues to application in various fields **Designs for Learning Environments of the Future** Michael Jacobson, Peter Reimann, 2010-03-10 Few things are as certain as societal changes and the pressing need for educators to prepare students with the knowledge and ways of thinking necessary for the challenges in a changing world In the forward thinking pages of Designs for Learning Environments of the Future international teams of researchers present emerging developments and findings in learning sciences and technologies at the infrastructure curricular and classroom levels Focusing on ideas about designing innovative environments for learning in areas such as biology engineering genetics mathematics and computer science the book surveys a range of learning technologies being explored around the world a spectrum as diverse as digital media computer modeling and 3D virtual worlds and addresses challenges arising from their design and use The editors holistic perspective frames these innovations as not only discrete technologies but as flexible learning environments that foster student engagement participation and collaboration Contributors describe possibilities for teaching and learning in these and other cutting edge areas Working with hypermodels and model based reasoning Using visual representations in teaching abstract concepts Designing strategies for learning in virtual worlds Supporting net based collaborative teams Integrating innovative learning technologies into schools Developing personal learning communities Designs for Learning Environments of the Future will enhance the work of a wide range of professionals including researchers and graduate students in the learning and cognitive sciences and educators in the physical and social sciences Fractals for the Classroom: Strategic Activities Volume Two Heinz-Otto Peitgen, Hartmut Jürgens, Dietmar Saupe, Evan Maletsky, Terry Perciante, Lee Yunker, 2013-06-29 The same factors that motivated the writing of our first volume of strategic activities on

fractals continued to encourage the assembly of additional activities for this second volume Fractals provide a setting wherein students can enjoy hands on experiences that involve important mathematical content connected to a wide range of physical and social phenomena The striking graphic images unexpected geometric properties and fascinating numerical processes offer unparalleled opportunity for enthusiastic student inquiry Students sense the vigor present in the growing and highly integrative discipline of fractal geom etry as they are introduced to mathematical developments that have occurred during the last half of the twentieth century Few branches of mathematics and computer science offer such a contem porary portrayal of the wonderment available in careful analysis in the amazing dialogue between numeric and geometric processes and in the energetic interaction between mathematics and other disciplines Fractals continue to supply an uncommon setting for animated teaching and learn ing activities that focus upon fundamental mathematical concepts connections problem solving techniques and many other major topics of elementary and advanced mathematics. It remains our hope that through this second volume of strategic activities readers will find their enjoyment of mathematics heightened and their appreciation for the dynamics of the world in creased. We want experiences with fractals to enliven curiosity and to stretch the imagination

Connecting Self-regulated Learning and Performance with Instruction Across High School Content Areas Maria K. DiBenedetto, 2018-07-23 This book shows how principles of self regulated learning are being implemented in secondary classrooms The 14 chapters are theoretically driven and supported by empirical research and address all common high school content areas The book comprises 29 lesson plans in English language arts natural and physical sciences social studies mathematics foreign language art music health and physical education Additionally the chapters address students with special needs technology and homework Each chapter begins with one or more lesson plans written by master teachers followed by narratives explaining how the lesson plans were implemented The chapters conclude with an analysis written by expert researchers of the self regulated learning elements in the lessons Each lesson and each analysis incorporate relevant educational standards for that area Different types of high schools in several states serve as venues This powerful new book edited by Maria K DiBenedetto provides a unique and invaluable resource for both secondary teachers and researchers committed to supporting adolescents in the development of academic self regulation Each chapter is jointly written by teachers who provide a wealth of materials including lesson plans and researchers who situate these lesson plans and academic self regulation goals within the larger work on self regulation. The topics covered are far broader than any other book I have seen in terms of developing academic self regulation covering over a dozen content areas including literacy mathematics social studies the sciences and the arts Teachers and scholars alike will find this book a must read Karen Harris EdD Arizona State University A practical and magnificent blend of educational research and application This book goes beyond presenting the findings of research on self regulation by connecting detailed strategies that align with the standards to the research DiBenedetto et al clearly illustrate how to develop self regulated learners in the classroom A refreshing must
