Voluson 730 Expert Operation Manual:

Detection of Fetal Abnormalities Based on Three Dimensional Nuchal Translucency Khin Wee Lai, Eko

Supriyanto, 2012-10-29 Ultrasound US prenatal screening has been proposed as the most effective technique for Trisomy 21 early assessment. Assessment of Nuchal Translucency (NT) offers a promising non-invasive method for fetal abnormalities detection up to 75%. Nevertheless, current clinician practice of NT examination by locating the sonogram calipers on 2D US image requires highly trained and competent operators by adhering to a standard tedious protocol; therefore, it is prone to errors and hence it decreases the reliability in intra and inter observer repeatability. This Brief provides the basic knowledge regarding Trisomy 21 diseases and its existing detection methods. The restrictions and disadvantages of each method are discussed accordingly. Therefore, a non-invasive early detection method using 3D ultrasound reconstruction of Nuchal Translucency is introduced. This new method for 3D NT assessments has an edge over the previous 2D methods and entails the composite function in visualizing the explicit internal marker structure. Further image processing techniques covered from data acquisition, pre-processing, speckle noise reduction, and 3D segmentation are also discussed. This should be especially useful for students and professional researchers in the Biomedical and image processing fields.

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2008 Dimitris Metaxas, Leon Axel, Gabor Fichtinger, Gabor Szekely, 2008-09-10 The 11th International Conference on Medical Imaging and Computer Assisted Intervention (MICCAI 2008) was held at the Helen and Martin Kimmel Center of New York University, New York City, USA, on September 6-10, 2008. MICCAI is the premier international conference in this domain with depth papers on the multidisciplinary fields of biomedical image computing and analysis, computer-assisted intervention, and medical robotics. The conference brings together biological scientists, clinicians, computer scientists, engineers, mathematicians, physicists, and other interested researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The conference is both very selective and very attractive; this year we received a record number of 700 submissions from 34 countries and 6 continents, from which 258 papers were selected for publication, which corresponds to a success rate of approximately 36%. Some interesting facts about the distribution of submitted and accepted papers are shown graphically at the end of this preface. The paper selection process this year was based on the following procedure, which included the introduction of several novelties over previous years:

1. A Program Committee (PC) of 49 members was recruited by the Program Chairs to get the necessary body of expertise and geographical coverage. All PC members agreed in advance to participate in the final paper selection process.
2. Key words grouped in 7 categories were used to describe the content of the submissions and the expertise of the reviewers.
