The engine has wet, replaceable cylinder liners and two valves per cylinder with replaceable valve guides and valve seat inserts. The accelerator position is transferred electrically from the accelerator pedal to the control unit (E-ECU). All models have VHP (Variable horsepower).

WHP

All Volvo grader models have engines that provide three different power levels depending on the gear selected by the operator.

WHP engine power Transmission gear

WHP	WHP	WHP
Low	71, 72, 81	71, 72, 73, 81, 82
Mid	71, 72, 73, 81, 82	71, 72, 73, 74, 81, 82
High	71, 72, 81	71, 72, 73, 74, 81, 82

Electrical system

The electrical system is a 24VDC, negative-ground system. Power is supplied by two 12VDC batteries connected in series. Battery charging is accomplished using a standard 80 amp alternator or an optional 100 amp alternator. Electrical power can be isolated using a battery disconnect switch.

The machine has three electronic control units (ECUs). The ECU for the instrumentation is integrated with the display unit, warning lamps and instruments, and provides the operator with information via these.

The ECU for the machine's engine signals from sensors on the machine and these are passed on to the ECU and ECU. The ECU's placed in the electrical distribution box on the back wall of the cab.

The ECU controls the engine. For D7 engines, the ECU is installed in the cooling module. For D8 engines, the ECU is installed on the engine.

Power transmission

All machine models are equipped with the standard 47500 power/shift transmission, which has 8 forward and 4 reverse speeds. All machine models can be equipped with the optional 475100 power/shift transmission, which has 11 forward and 4 reverse speeds. Both transmissions are direct drive, fully sequential units using a powershift design.

Rear axle / tandem

Models G900, G940, G940 and G990 are equipped with the AP400 rear axle. Models G970, G970 and G990 are equipped with the AP400 rear axle. Each has an operator controlled lock / unlock differential. Tandem wheels are chain drive.

Brake system

Hydraulically actuated, oil disc service brakes are located at the four tandem drive wheels. The cross-over dual braking circuit provides even braking on both sides of the machine.

If the engine stalls or hydraulic boost pressure becomes unavailable, full braking capability is available through a return system. An decoupler motor and hydraulic pump unit supplies the power required to bring the machine to a safe stop.

Parking brake

The parking brake is a spring applied / hydraulically released, wet multiple disc brake. The brake assembly is installed inside the rear axle housing. In the event of transmission system pressure loss, an accumulator in the circuit stores system pressure and allows the parking brake to remain released for about 10 minutes.

Steering system

The steering system is a closed-center, dynamic signal load sensing system. The hydraulic steering system incorporates two steering cylinders and the turning act is 50°. The turning wheel and articulating frame features can be used to decrease the turning radius. Secondary steering is available as an option.

Cab and frame

Enclosed cabs can be provided with pressurized air conditioning and / or heating systems as options. All controls are housed in the fully adjustable steering pedestal and the right-hand side controls.

Ergonomic seating and hydraulic control lever placement ensure operator comfort and efficiency. The frame articulates 12° (models G900 to G940), 11° (models G970 to G990) to the left or to the right and uses lock valves to ensure stable operation.

ROPS and FOPS

The cab is approved as a protective cab according to the ROPS and FOPS standards, see page 107. ROPS is an abbreviation of Falling Object Protective Structure (roof protection) and FOPS is an abbreviation of Roll Over Protective Structure (roll over protection).

Never carry out any unauthorized alterations to the cab without first, through a dealer, having discussed the alteration with personnel at the Volvo CE Engineering Department. This department will decide whether the alteration may cause the ROPS approval to become void.

Hydraulic system

The closed-center hydraulic system uses a pressure and flow compensated dual (spring) variable displacement piston pump. The pump supplies oil to the implements and the steering.

The cooling fan is driven by a hydraulic motor. Fan speed is variable and is determined by various cooling requirements. The fan operates between pre-determined minimum and maximum speeds. The fan remains at its minimum speed until there is a demand for cooling. Fan speed will automatically increase with the demand for cooling.

Lock valves are incorporated in the blade lift, moldboard lift, circle shift, wheel base and articulation hydraulic circuits to prevent cylinder drift. The control levers are direct drive, feathering type located on a fully adjustable steering pedestal.
