## Description

Wheel loaders L90, L70 and L95 have articulated frame steering and four-wheel drive.

The engine is a six-cylinder, four-cycle, direct injection, turbocharged diesel engine of the type TAD5.

The transmission is hydro-mechanical where all gears are in constant mesh. Its type designation is H750 for L90, H750 for L70 and H7500 for L95.

There is a single stage hydraulic torque converter between the engine and the transmission.

Front and rear axles have fully floating drive shafts with planetary gears in the wheel hubs. The front axle is equipped with a differential lock.

The service brakes on these machines are wet type disc brakes. The service brakes are built into each wheel hub.

The parking brake on L90 and L70 is a disc brake positioned externally on the front output shaft of the transmission. On L95 the parking brake is positioned internally on the front output shaft of the transmission.

The steering system is hydraulic with a variable flow-riding axial piston pump and two hydraulic cylinders steering cylinders.
