Campbell,Fausto Tomei,2015 This innovative study presents concepts and problems in soil physics and provides solutions using original computer programs It provides a close examination of physical environments of soil including an analysis of the movement of heat water and gases The authors

employ the programming language Python which is now widely used for numerical problem solving in the sciences In contrast to the majority of the literature on soil physics this text focuses on solving not deriving differential equations for transport Using numerical procedures to solve differential equations allows the solution of quite difficult problems with fairly simple mathematical tools Numerical methods convert differential into algebraic equations which can be solved using conventional methods of linear algebra Each chapter introduces a soil physics concept and proceeds to develop computer programs to solve the equations and illustrate the points made in the discussion Problems at the end of each chapter help the reader practise using the concepts introduced The text is suitable for advanced undergraduates graduates and researchers of soil physics It employs an open source philosophy where computer code is presented explained and discussed and provides the reader with a full understanding of the solutions Once mastered the code can be adapted and expanded for the user s own models fostering further developments The Python tools provide a simple syntax Object Oriented Programming techniques powerful mathematical and numerical tools and a user friendly environment **Programming Computer Vision with Python** Jan Erik Solem,2012-06-19 If you want a basic understanding of computer vision s underlying theory and algorithms this hands on introduction is the ideal place to start You ll learn techniques for object recognition 3D reconstruction stereo imaging augmented reality and other computer vision applications as you follow clear examples written in Python Programming Computer Vision with Python explains computer vision in broad terms that won t bog you down in theory You get complete code samples with explanations on how to reproduce and build upon each example along with exercises to help you apply what you ve learned This book is ideal for students researchers and enthusiasts with basic programming and standard mathematical skills Learn techniques used in robot navigation medical image analysis and other computer vision applications Work with image mappings and transforms such as texture warping and panorama creation Compute 3D reconstructions from several images of the same scene Organize images based on similarity or content using clustering methods Build efficient image retrieval techniques to search for images based on visual content Use algorithms to classify image content and recognize objects Access the popular OpenCV library through a Python interface **Python Scripting for Computational Science** Hans Petter Langtangen,2013-03-14 The primary purpose of this book is to help scientists and engineers work ing intensively with computers to become more productive have more fun and increase the reliability of their investigations Scripting in the Python programming language can be a key tool for reaching these goals 27 29 The term scripting means different things to different people By scripting I mean developing programs of an administering nature mostly to organize your work using languages where the abstraction level is higher and program ming is more convenient than in Fortran C C or Java Perl Python Ruby Scheme and Tel are examples of languages supporting such high level programming or scripting To some extent Matlab and similar scientific com puting environments also fall into this category but these environments are mainly used for computing and visualization with built in tools while script ing aims at
