Robinson, 1862 *Geometry: Euclid and Beyond* Robin Hartshorne, 2013-11-11 In recent years I have been teaching a junior senior level course on the classical geometries This book has grown out of that teaching experience I assume only high school geometry and some abstract algebra The course begins in Chapter 1 with a critical examination of Euclid's Elements Students are expected to read concurrently Books I-IV of Euclid's text which must be obtained separately The remainder of the book is an exploration of questions that arise naturally from this reading together with their modern answers To shore up the foundations we use Hilbert's axioms The

Cartesian plane over a field provides an analytic model of the theory and conversely we see that one can introduce coordinates into an abstract geometry The theory of area is analyzed by cutting figures into triangles The algebra of field extensions provides a method for deciding which geometrical constructions are possible The investigation of the parallel postulate leads to the various non Euclidean geometries And in the last chapter we provide what is missing from Euclid's treatment of the five Platonic solids in Book XIII of the Elements For a one semester course such as I teach Chapters 1 and 2 form the core material which takes six to eight weeks     A Treatise on Geometry and Its Application in the Arts Dionysius Lardner,1840     **Polyhedra** Peter R. Cromwell,1997 Polyhedra have cropped up in many different guises throughout recorded history In modern times polyhedra and their symmetries have been cast in a new light by combinatorics and group theory This book comprehensively documents the many and varied ways that polyhedra have come to the fore throughout the development of mathematics The author strikes a balance between covering the historical development of the theory surrounding polyhedra and presenting a rigorous treatment of the mathematics involved It is attractively illustrated with dozens of diagrams to illustrate ideas that might otherwise prove difficult to grasp Historians of mathematics as well as those more interested in the mathematics itself will find this unique book fascinating     **Year 9 Advanced Mathematics** Lyn Baker,2006 Revises the NSW Year 9 Stage 5 3 Mathematics course Cover     *Year 9 Intermediate Mathematics* Lyn Baker,2004-12-31     **Elements of Geometry** Andrew Wheeler Phillips,Irving Fisher,1897     **The geometry, by T.
