**Managing Restructuring in the Textile and Garment Subsector** Saha Dhevan Meyanathan,1994-01-01 Summary edition The full report analyzes the issues affecting income security for the elderly in both developing and industrial nations

Systems providing financial security for the old are under increasing strain throughout the world. Changing demographics have led to an increased proportion of old people in the general population. Traditional means of support for the old such as extended families are weakening. Meanwhile formal systems such as government backed pensions have proven unstable. For these reasons economists, policymakers and government officials are exploring ways to address such issues as: How to ensure financial security for the old and the best ways of paying for such security. The roles of the public and private sectors when systems are used to enhance rather than detract from economic growth. This study, the first comprehensive and global examination of old age security, addresses such issues. It identifies three functions of old age financial security programs: redistribution, saving and insurance. It evaluates the policy options for meeting these functions using two criteria: their impact on the aged and their impact on the economy as a whole. The study suggests that financial security for the old and economic growth would be better served if governments relied on three systems: 1. A publicly managed system with mandatory participation and the limited goal of reducing poverty among the old. 2. A privately managed mandatory savings system. 3. A voluntary savings system. These three systems would ensure against the many risks of old age. The study concludes that a combination of different income security policies is more effective than any single approach and that all countries should begin planning for their aging populations now. Advanced research into wool science and technology is leading to a better understanding of the properties of wool. Wool is increasingly being seen as a high performance fibre with new modifications and applications. Advances in wool technology presents a comprehensive account of these developments and innovations. Part one includes advances that have occurred in the production and processing of wool. Topics range from the progress in wool spinning, weaving and colouration to environmental supply chain management and to the role of genetic engineering in improved wool production. Part two reviews new wool products and applications. Chapters include the production of brighter and whiter wool, high performance wool blends and wool for apparel. With its two distinguished editors and array of international contributors, this book is a valuable reference for producers, manufacturers, retailers and all those wishing to improve and understand developments in wool technology. It will also be suitable for researchers in industry or academia. Presents a comprehensive account of recent developments and innovation surrounding the high performance fibre. Examines advances in wool production and processing from wool spinning to genetic engineering in improved production. Considers environmental supply chain management.
