Recipe Mod 175:

The Cookbook Library Anne Willan, Mark Cherniavsky, 2012-03-03 This gorgeously illustrated volume began as notes on the collection of cookbooks and culinary images gathered by renowned cookbook author Anne Willan and her husband Mark Cherniavsky. From the spiced sauces of medieval times to the massive roasts and ragoûts of Louis XIV's court to elegant eighteenth century chilled desserts, The Cookbook Library draws from renowned cookbook author Anne Willan's and her husband Mark Cherniavsky's antiquarian cookbook library to guide readers through four centuries of European and early American cuisine. As the authors taste their way through the centuries describing how each cookbook reflects its time, Willan illuminates culinary crosscurrents among the cuisines of England, France, Italy, Germany, and Spain. A deeply personal labor of love, The Cookbook Library traces the history of the recipe and includes some of their favorites.

A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling. Not so today. In seeking to answer fundamental questions about how biological systems function and change over time, the modern biologist is as likely to rely on sophisticated mathematical and computer-based models as traditional fieldwork. In this book, Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own. The book starts at an elementary level of mathematical modeling, assuming that the reader has had high school mathematics and first year calculus. Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class-structured and probabilistic models. The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory. Through examples, they describe how models have been used to understand such topics as the spread of HIV, chaos, the age structure of a country, speciation, and extinction. Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves. This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists. A how-to guide for developing new mathematical models in biology. Provides step-by-step recipes for constructing and analyzing models. Interesting biological applications. Explores classical models in ecology and evolution. Questions at the end of every chapter. Primers cover important mathematical topics. Exercises with answers. Appendixes summarize useful rules. Labs and advanced material available.

Catalytic Polymerization of Cycloolefins V. Dragutan, R. Streck, 2000-06-26 This book covers the most important topics concerning cationic Ziegler-Natta and ring-opening metathesis polymerization of cycloolefins. The work describes the major pathways that cycloolefins can follow under the action of specific catalytic systems, essentially vinyl and ring-opening polymerization, both reaction types allowing the manufacture of distinct products with wide applicability in modern technologies. The comprehensive data available on this subject are logically and systematically selected and reviewed throughout 18 chapters according to the basic catalytic processes involved, types of

monomers and catalysts employed reaction conditions and application fields The modern trends in design of chiral metallocene catalysts well defined living metathesis catalysts catalysts tolerant toward functionalities and water systems are highlighted The book discusses in detail the relevant aspects of these processes including reaction thermodynamics kinetics mechanisms and stereochemistry and correlates the structure of produced polymers with their chemical and physical mechanical properties Related important topics include Ziegler Natta polymerization of olefins and dienes atom transfer radical polymerization of vinyl compounds metathesis of olefins and acetylenes acyclic diene metathesis reaction carbonyl olefination reaction metathesis polymerization of acetylenes metathesis degradation of polymers and ring opening polymerization of heterocycles Special emphasis is laid upon the manufacture of commercial products new polymers and copolymers of potential interest for industry and design and synthesis of speciality polymers with particular structures and architectures and desired properties The book critically evaluates the most recent achievements reported in this field and outlines the modern trends on the research and application of the catalytic processes for cycloolefin polymerization For the first time comprehensive information about the published data on the subject up to now is provided for both academic and industrial researchers working in the areas of polymer chemistry organic and organometallic chemistry surface science and catalysis petrochemistry and chemical engineering This stimulating book offers an enlightening introduction and a quick documentation on the subject as well as a solid background in this field Moreover the work offers a wealth of useful information for specialists applying polymers in various scientific and industrial areas

Swift as Nemesis Frank T. Boyle, 2000 With much of the intellectual discourse of the last several decades concerned with reconsiderations of modernity how do we read the works of Jonathan Swift who ridiculed the modern even as it was taking shape The author approaches the question of modernity in Swift by way of a theory of satire from Aristotle via Swift and Bakhtin that eschews modern notions that satire is meant to reform and correct Linking satire to Nemesis the goddess of righteous vengeance Swift as Nemesis develops new readings of Swift's major satires From his first published work Swift associates the modern with the new science and represents modernity as a pernicious strain of narcissism that devalues humanistic discourse In his early satires he compiles a profane history of the modern in which the new philosophy is an extension of the methodology of alchemists the debased Roman Catholic Church and the various Puritan sects This history culminates in A Tale of a Tub with

an assault on the intellectual basis of that most formidable of all modern works Newton's Principia In Gulliver's Travels Swift attacks modern culture while aiming at individual readers Novelistic identification with Gulliver's narcissism beginning with masturbation and encompassing various scatological observations implicates readers in the larger cultural critique in which Gulliver paralleling Narcissus rejects cultures he encounters until he embraces a cultural image that destroys him The wider cultural implications of Swift's work are evident in the way he uses travel as a metaphor to link the inhuman consequences of European imperialism with the discoveries of the new science Finally Swift's works like the mirror Nemesis uses to destroy Narcissus are shown to return the narcissistic projections of critics Recognizing that Narcissus and Echo have become important to the critique of modernism the author argues that readers will find it useful now to turn to the contextualizing role of Nemesis She emerges from Swift's critically irreducible satire with an ironic claim on modernity itself

Tocqueville between Two Worlds Sheldon S. Wolin, 2009-02-09 Alexis de Tocqueville may be the most influential political thinker in American history He also led an unusually active and ambitious career in French politics In this magisterial book one of America's most important contemporary theorists draws on decades of research and thought to present the first work that fully connects Tocqueville's political and theoretical lives In doing so Sheldon Wolin presents sweeping new interpretations of Tocqueville's major works and of his place in intellectual history As he traces the origins and impact of Tocqueville's ideas Wolin also offers a profound commentary on the general trajectory of Western political life over the past two hundred years Wolin proceeds by examining Tocqueville's key writings in light of his experiences in the troubled world of French politics He portrays Democracy in America for example as a theory of discovery that emerged from Tocqueville's contrasting experiences of America and of France's constitutional monarchy He shows us how Tocqueville used Recollections to reexamine his political commitments in light of the revolutions of 1848 and the threat of socialism He portrays The Old Regime and the French Revolution as a work of theoretical history designed to throw light on the Bonapartist despotism he saw around him Throughout Wolin highlights the tensions between Tocqueville's ideas and his activities as a politician arguing that despite his limited political success Tocqueville was perhaps the last influential theorist who can be said to have truly cared about political life In the course of the book Wolin also shows that Tocqueville struggled with many of the forces that constrain politics today including the relentless advance of capitalism of science and technology and of state bureaucracy He concludes that Tocqueville's insights and anxieties about the impotence of politics in a postaristocratic era speak directly to the challenges of our own postdemocratic age A monumental new study of Tocqueville this is also a rich and provocative work about the past the present and the future of democratic life in America and abroad

Desk Book American Type Founders Company, 1898 **The Clock and the Mirror** Nancy G. Siraisi, 2015-12-08 Girolamo Cardano 1501 1576 renowned as a mathematician encyclopedist astrologer and autobiographer was by profession a medical practitioner His copious writings on medicine reflect both the complexity and diversity of the Renaissance medical world and the breadth of his own interests In this book Nancy Siraisi draws on selected themes in Cardano s medical writings to explore in detail the relation between medicine and wider areas of Renaissance culture Cardano s medical advice included the suggestion that the studious man should always have at hand a clock and a mirror a clock to keep track of the passage of

time and a mirror to observe the changing condition of his body The remark which recalls his astrological and autobiographical interests is emblematic of the many connections between his medicine and his other pursuits Cardano's philosophical eclecticism beliefs about occult forces in nature theories about dreams and free transitions between academic and popularizing scientific writing also contributed to his medicine As a physician he greeted two different types of medical innovation in his lifetime with equal enthusiasm improved access to the Hippocratic corpus and Vesalian anatomy Cardano presented himself as a practitioner with special gifts Yet his medical learning remained rooted in the Galenic tradition that he often criticized Meanwhile he negotiated a career in a medical community characterized by personal and social rivalries a competitive medical marketplace and strong institutional and religious pressures Originally published in 1997 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
