The Lens NK Guy, 2012-10-08 Which lens should I buy for my camera It's such a simple question but choosing the right lens or lenses is actually one of the most important photographic decisions you can make Nothing affects the quality of a photo more than the lens It's no longer just about the megapixels it's the glass that makes all the difference Many first time buyers of DSLRs don't venture past the basic lens included in the box While some are reluctant to spend more money others are confused by all the buzzwords or are overwhelmed by all the choices out there It's really a shame because interchangeable lenses give you amazing scope for quality photography Take in vast sweeping scenes with a wide angle lens Capture faraway birds with a telephoto lens Examine the tiniest detail of a flower with a macro lens Record the perfect portrait with a prime lens Anything is possible when you choose the right lens for the job This book isn't a simple catalogue of available lenses New products are

coming out all the time and comparing specific lenses can be difficult. Instead, author N K Guy gives you all the information you need to make smart buying decisions. Optical technology is demystified, arcane terminology is decoded, and practical tips are provided. The Lens will help you build the perfect lens collection to suit your needs now and in the future. How to Photograph the Moon and Planets with Your Digital Camera Tony Buick, Philip Pugh, 2011-01-25. Although astronomical CCD cameras can be very costly, digital cameras the kind you use on holiday on the other hand are relatively inexpensive. Moreover, their technology, especially thermal noise sensitivity, ISO number, and resolution has progressed to a point where such cameras are more than capable of photographing the brighter astronomical objects. Now Tony Buick has teamed up with fellow author and astro imager Phil Pugh to produce a completely revised, updated, and extended second edition to *How to Photograph the Moon and Planets with your Digital Camera*, first published in 2006. The revisions take into account changing and improving camera technology and some items which are now available commercially but which previously had to be home made. The section of solar observing has been expanded to include observing by H alpha light, and among the many additional sections are photographing the constellations, aurorae, and basic post imaging processing.
