

FRICTION

Friction occurs when two surfaces meet and rub against each other. Friction slows a moving object, but can help control the movement.

ROUGH SURFACES

Rough surfaces slow moving objects but can be helpful.

The friction between the rough gravel and the tyres slows the racing car down.

The friction between his boots and the rock surface helps the climber keep his grip.

HEAT

Friction produces heat.

Rubbing your hands together produces heat.

Rubbing two pieces of wood together can produce enough heat to create flames.

AIR RESISTANCE

Air resistance can affect motion: it can slow things down.

Gravity pulls this person down.

A small area means low air resistance and therefore a fast fall.

A large area means more air resistance and therefore a slower fall.

You can reduce air resistance by changing shape to become more streamlined.

The ski jumper tucks his arms in to reduce air resistance.

The cyclist tucks his head down to reduce air resistance.

This car is designed to be smooth and streamlined so that it goes fast.

Johnson, 2008 Slips and Falls A new Approach to Friction Measurements is an explanation of the physics topic of friction and its relation to slips and falls It clearly guides you through the physics principles involved measurement techniques equipment and technology and details their validity and accuracy It is an essential book for any professional involved in the investigation research and litigation of slip and fall incidents Fundamentals of Friction I.L. Singer, H. Pollock, 1992-08-31 Fundamentals of Friction unlike many books on tribology is devoted to one specific topic friction After introductory chapters on scientific and engineering perspectives the next section contains the necessary background within the areas of contact mechanics surfaces and adhesion Then on to fracture deformation and interface shear from the macroscopic behavior of materials in frictional contact to microscopic models of uniform and granular interfaces Lubrication by solids liquids and gases is presented next from classical flow properties to the reorganization of monolayers of molecules under normal and shear stresses A section on new approaches at the nano and atomic scales covers the physics and chemistry of interfaces an array of visually exciting simulations using molecular dynamics of solids and liquids in sliding contact and related AFM STM studies Following a

section on machines and measurements the final chapter discusses future issues in friction Friction and Instabilities
J.A.C. Martinis, M. Raous, 2002-11-11 The book addresses instability and bifurcation phenomena in frictional contact problems
The treatment of this subject has its roots in previous studies of instability and bifurcation in elastic thermoelastic or elastic
plastic bodies and in previous mathematical mechanical and computational studies of unilateral problems The salient feature
of this book is to put together and develop concepts and tools for stability and bifurcation studies in mechanics taking into
account the inherent non smoothness and non associativity non symmetry of unilateral frictional contact laws The mechanical
foundations the mathematical theory and the computational algorithms for such studies are developed along six chapters
written by the lecturers of a CISM course Those concepts and tools are illustrated not only with enlightening academic
examples but also with some demanding industrial applications related namely to the automotive industry
