Kilpatrick,Elliott S. Goldstein,2011 Jacket **Drug Metabolism** Katherine Dunnington,2021-12-22 Drug metabolism comprises the identification characterization and quantification of the chemicals or compounds produced in an animal or human upon administration of a drug Research practices not only require the chemical structure but also aim to determine the pharmacological activities and or toxicity of these compounds This is first performed in animals as studies attempt to identify and quantify metabolites and later in humans with care to further characterize metabolites that are either unique to or produced disproportionately in humans compared to animals Characterization includes the determination of enzyme systems or other biological mechanisms that produce each identified metabolite this information is used to predict potential drug drug interactions with other compounds that increase or decrease metabolite formation and sources of biological variability in response or toxicity with varying patient genetics which affect CYP isoform expression This book s purpose is to provide some understanding of the biology and current technology applied in the field of drug metabolism *Epigenetics in Human Disease* Trygve O. Tollefsbol,2012-07-26 Epigenetics is one of the fastest growing fields of sciences illuminating studies of human diseases by looking beyond genetic make up and acknowledging that outside factors play a role in gene expression The goal of this volume is to highlight those diseases or conditions for which we have advanced knowledge of epigenetic factors such as cancer autoimmune disorders and aging as well as those that are yielding exciting breakthroughs in epigenetics such as diabetes neurobiological disorders and cardiovascular disease Where applicable attempts are made to not only detail the role of epigenetics in the etiology progression diagnosis and prognosis of these diseases but also novel epigenetic approaches to the treatment of these diseases Chapters are also presented on human imprinting disorders respiratory diseases infectious diseases and gynecological and reproductive diseases Since epigenetics plays a major role in the aging process advances in the epigenetics of aging are highly relevant to many age related human diseases Therefore this volume closes with chapters on aging epigenetics and breakthroughs that have been made to delay the aging process through epigenetic approaches With its translational focus this book will serve as valuable reference for both basic scientists and clinicians alike Comprehensive coverage of fundamental and emergent science and clinical usage Side by side coverage of the basis of epigenetic diseases and their treatments Evaluation of recent epigenetic clinical breakthroughs

Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species
