

Chapter 16

Section 2 Disruption of Genetic Equilibrium

Three Kinds of Selection

FIGURE 16-8

Natural selection is evident when the distribution of traits in a population changes over time, shifting from the original bell curve (indicated in red) toward another pattern (shown in blue). Stabilizing selection (a) is a shift toward the center of the original bell curve. Disruptive selection (b) is a shift in both directions away from the center. Directional selection (c) is a shift in one direction only.

Fritz,Ellen L. Simms,2012-07-15 Far from being passive elements in the landscape plants have developed many sophisticated chemical and mechanical means of deterring organisms that seek to prey on them This volume draws together research from ecology evolution agronomy and plant pathology to produce an ecological genetics perspective on plant resistance in both natural and agricultural systems By emphasizing the ecological and evolutionary basis of resistance the book makes an important contribution to the study of how phytophages and plants coevolve Plant Resistance to Herbivores and Pathogens

not only reviews the literature pertaining to plant resistance from a number of traditionally separate fields but also examines significant questions that will drive future research. Among the topics explored are selection for resistance in plants and for virulence in phytophages, methods for studying natural variation in plant resistance, the factors that maintain intraspecific variation in resistance, and the ecological consequences of within-population genetic variation for herbivorous insects and fungal pathogens. A comprehensive review of the theory and information on a large, rapidly growing and important subject.
