Grayson, 2013-09-24 Volcanic Activity and Human Ecology deals with dating chronology stratigraphy volcanic activity and with the impacts of volcanism on animals plants human populations and the environment Some of the chapters explain how such findings must be weighed against other causes that influence human behavior and survival such as factors of social customs climatic change shifting biogeographic patterns disease and the ability to adapt Each of the chapters that assess the possible human response to volcanism does so by searching for multiple explanations of the archaeological record avoiding the simple argument that people were dramatically and inevitably overcome by catastrophic geologic events The book begins with discussions of volcanism as seen by geologists and pedologists These include s a general overview of volcanoes and volcanism a review of the production dispersal and properties of tephra and of the geologic methods used to study tephra and the nature of volcanic soils and their economic impact Subsequent chapters use the geologic and modern records to examine volcanoes as hazards to people The final series of papers deals with the interrelationships between volcanism and human occupations as seen through the archaeological paleobotanical and paleozoological records

Special track papers were solicited separately through the Organizing and Program Committees of each track. A total of 40 papers were accepted for oral presentation and 15 papers for poster presentation in the special tracks. All papers were reviewed with an emphasis on potential to contribute to the state of the art in the field. Selection criteria included accuracy and originality of ideas, clarity and significance of results, and presentation quality. The review process was quite rigorous, involving two to three independent blind reviews followed by several days of discussion. During the discussion period, we tried to correct anomalies and errors that might have existed in the initial reviews.
