Saito, T. Sawada, 2002-11-11 This volume is a collection of the papers presented at the International Seminar on Advanced Nuclear Energy Systems toward Zero Release of Radioactive Wastes which was held in Japan in November 2000 Scientists and engineers working in academia research organizations and industry came together to discuss the role and contributions of nuclear energy to the environmental issues in the new millennium It provided a forum for open discussions about the pursuit of solutions for the reduction of nuclear wastes based on the accelerator and fusion technologies in addition to the advanced fission technology to harmonize the nuclear energy systems with the global environment It also promoted future international collaboration in the following research fields the role of nuclear energy in the new millennium waste management transmutation of minor actinides and fission products advanced fission systems accelerator driven systems fusion systems nuclear database and advanced nuclear fuel cycles for transmutation of wastes Published originally as a special issue volume 40 3 4 of the international journal Progress in Nuclear Energy *Niels Bohr - Collected Works* Finn Aaserud, 2011-09-22 Niels Bohr Collected Works Volume 13 Cumulative Subject Index documents aspects of Niels Bohr s varied life and work in the form of a cumulative subject index with emphasis on his scientific contributions in the field of physics The general organization of the material is thematic rather than strictly chronological allowing for the presentation of each paper or group of papers along with other relevant material such as drafts notes letters and other items The book is illustrated with rare photos and includes explanatory notes as well as a bibliography The bibliography is restricted to the versions of Bohr s publications reproduced in this volume and encompasses a wide range of topics in physics from the determination of the surface tension of water by the method of jet vibration to the electron theory of metals and of

thermoelectric phenomena the theory of the decrease of velocity of moving electrified particles on passing through matter the constitution of atoms and molecules and the spectra of helium and hydrogen Bohr's other papers focus on the effect of electric and magnetic fields on spectral lines the quantum theory of radiation and the structure of the atom the polarization of radiation in the quantum theory and collisions between atomic systems and free electrical particles This monograph will be useful to students practitioners and researchers interested in Bohr's life and work in general and in quantum mechanics in particular
