Coordination Chemistry of Macrocyclic Compounds Gordon Melson, 2012-12-06 Chemists have been aware of the existence of coordination compounds containing organic macrocyclic ligands since the first part of this century however only during the past few years have they expanded research into the chemistry of these compounds The expansion was initiated in the early 1960s by the synthesis and characterization of compounds containing some new macrocyclic ligands The synthesis of compounds which may serve as model systems for some natural products containing large rings as ligands provided the main goal for the early expansion of research effort indeed a recurrent theme behind much of the reported chemistry has been the analogy between synthetic macrocyclic compounds and many natural product systems More recently the emphases of reported research have ranged over the whole spectrum of chemistry and the number of publications that discuss macrocyclic chemistry has increased at a dramatic rate The completed research has been reported in a variety of journals throughout the world but there has been no previous attempt to bring the major developments together under one cover This book therefore attempts to satisfy the need for a single source in which there is both a collection and a correlation of information concerning the coordination chemistry of macrocyclic compounds The chapters in this book discuss various aspects of macrocyclic chemistry and while these chapters as a whole constitute an in depth survey of the state of the art of the field each chapter is written as a complete unit

Organometallic Chemistry M. L. H. Green, 2007 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry

Ferroelectrics Literature Index T. F. Connolly, 2012-12-06 Research on ferroelectricity and ferroelectric materials started in 1920 with the discovery by Valasek that the variation of spontaneous polarization in Rochelle salt with sign and magnitude of an applied electric field traced a complete and reproducible hysteresis loop Activity in the field was sporadic until 1935 when Busch and co workers announced the observation of similar

behavior in potassium dihydrogen phosphate and related compounds Progress thereafter continued at a modest level with the undertaking of some theoretical as well as further experimental studies In 1944 von Hippel and co workers discovered ferroelectricity in barium titanate The technological importance of ceramic barium titanate and other perovskites led to an upsurge of interest with many new ferroelectrics being identified in the following decade By 1967 about 2000 papers on various aspects of ferroelectricity had been published The bulk of this widely dispersed literature was concerned with the experimental measurement of dielectric crystallographic thermal electromechanical elastic optical and magnetic properties A critical and excellently organized compilation based on these data appeared in 1969 with the publication of Landolt Bornstein Volume 11 3 This superb tabulation gave instant access to the results in the literature on nearly 450 pure substances and solid solutions of ferroelectric and antiferroelectric materials Continuing interest in ferroelectrics spurred by the growing importance of electrooptic crystals resulted in the publication of almost as many additional papers by the end of 1969 as had been surveyed in Landolt Bornstein
