**Section 20.1 Electric Charge and Static Electricity****(pages 600–603)**

This section explains how electric charge is created and how positive and negative charges affect each other. It also discusses the different ways that electric charge can be transformed.

**Reading Strategy (page 600)**

**Identifying Main Ideas.** Copy the table on a separate sheet of paper. As you read, write the main ideas. For more information on this Reading Strategy, see the Reading and Study Skills in the Skills and Reference Handbook at the end of your textbook.

| Characteristics of Electric Charge |   |
|------------------------------------|---|
| Topic                              | Main Idea   |
| Electric Charge                    | Attraction or repulsion of electrons produces a net electric charge.            |
| Electric Forces                    | Like charges repel and opposite charges attract.                                |
| Electric Fields                    | The strength of a field depends on the net charge and distance from the charge. |
| Static Electricity                 | Charges can be transformed by friction, contact, and induction.                 |
