**Test Format:** Theoretical – 2 hours (same as lab test 1)

**Material covered:** Labs 5 (online assignment), 6, & 7

### General points:

As with lab test 1, for each lab, you should:

- 1) **understand the experiment procedures** – understand what you did in each experiment/analysis and why you did it.
- 2) **know and understand the *expected* results**
- 3) **be able to manipulate, interpret, and present data** – you should be able to perform the necessary calculations to present the trends in the data in graphical and/or tabular format.

Below is a lab-by-lab guide summarizing the most important elements.

### Lab 5 – Fermentation and Aerobic Respiration

There are 3 parts to this assignment:

#### *Case Study*

This part provided you with an opportunity to apply your knowledge of ACR. I will not ask you questions specific to this case study nor will I ask you about the specific details of ACR (e.g. cytochrome C). I do expect you to be able to apply your knowledge of ACR and fermentation in contexts such as the mock experiments in the rest of the assignment.

#### *Respirometer Experiment*

This experiment measured rates of cellular respiration using a respirometer.

- Know how a respirometer works
- Know the importance of KOH in the respirometer
- Be able to read respirometer data such as that shown in the online assignment and interpret the results

#### *Fermentation experiment*

This mock experiment showed the relative fermentation rates of yeast exposed to different substrates.

- Know the experiment setup (i.e. balloons attached to flasks containing a solution of fermenting yeast)
- Be able to compare and explain the reason for different relative fermentation rates between two different substrates (e.g. you were asked to explain why the fermentation rate for glucose was faster than that of starch)
