Example: $|-4x - 8| = 28$

Split into 2 Equations and Solve.

1st Case: $-4x - 8 = 28$ ← Positive

$$\begin{array}{rcl} & +8 & +8 \\ -4x - 8 & = & 28 \\ \hline -4x & = & 36 \\ \hline -4 & & -4 \\ x & = & -9 \end{array}$$

2nd Case: $-4x - 8 = -28$ ← Negative

$$\begin{array}{rcl} & +8 & +8 \\ -4x - 8 & = & -28 \\ \hline -4x & = & -20 \\ \hline -4 & & -4 \\ x & = & 5 \end{array}$$

Algebra Text: Intermediate Robert H. Alwin, Robert D. Hackworth, Joseph W. Howland, 1974 **Resources in Education**, 1998 **Research in Education**, 1974 Feature Extraction, Construction and Selection Huan Liu, Hiroshi

Motoda, 2012-12-06 There is broad interest in feature extraction construction and selection among practitioners from statistics pattern recognition and data mining to machine learning Data preprocessing is an essential step in the knowledge discovery process for real world applications This book compiles contributions from many leading and active researchers in this growing field and paints a picture of the state of art techniques that can boost the capabilities of many existing data mining tools The objective of this collection is to increase the awareness of the data mining community about the research of feature extraction construction and selection which are currently conducted mainly in isolation This book is part of our endeavor to produce a contemporary overview of modern solutions to create synergy among these seemingly different branches and to pave the way for developing meta systems and novel approaches Even with today s advanced computer technologies discovering knowledge from data can still be fiendishly hard due to the characteristics of the computer generated data Feature extraction construction and selection are a set of techniques that transform and simplify data so as to make data mining tasks easier Feature construction and selection can be viewed as two sides of the representation problem

Neural Networks and Animal Behavior Magnus Enquist, Stefano Ghirlanda, 2013-12-03 How can we make better sense of animal behavior by using what we know about the brain This is the first book that attempts to answer this important question by applying neural network theory Scientists create Artificial Neural Networks ANNs to make models of the brain These networks mimic the architecture of a nervous system by connecting elementary neuron like units into networks in which they stimulate or inhibit each other s activity in much the same way neurons do This book shows how scientists can employ ANNs to analyze animal behavior explore the general principles of the nervous systems and test potential generalizations among species The authors focus on simple neural networks to show how ANNs can be investigated by math and by computers They demonstrate intuitive concepts that make the operation of neural networks more accessible to nonspecialists The first chapter introduces various approaches to animal behavior and provides an informal introduction to neural networks their history and their potential advantages The second chapter reviews artificial neural networks including biological foundations techniques and applications The following three chapters apply neural networks to such topics as learning and development classical instrumental condition and the role of genes in building brain networks The book concludes by comparing neural networks to other approaches It will appeal to students of animal behavior in many disciplines It will also interest neurobiologists cognitive scientists and those from other fields who wish to learn more about

animal behavior The Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology

Scientific and Technical Aerospace Reports ,1994 *Robust Control Systems with Genetic Algorithms* Mo Jamshidi, Renato A. Krohling, Leandro dos S. Coelho, Peter J. Fleming, 2002-10-14 In recent years new paradigms have emerged to replace or augment the traditional mathematically based approaches to optimization The most powerful of these are genetic algorithms GA inspired by natural selection and genetic programming an extension of GAs based on the optimization of symbolic codes *Robust Control Systems with Genetic Algorithms* builds a bridge between genetic algorithms and the design of robust control systems After laying a foundation in the basics of GAs and genetic programming it demonstrates the power of these new tools for developing optimal robust controllers for linear control systems optimal disturbance rejection controllers and predictive and variable structure control It also explores the application of hybrid approaches how to enhance genetic algorithms and programming with fuzzy logic to design intelligent control systems The authors consider a variety of applications such as the optimal control of robotic manipulators flexible links and jet engines and illustrate a multi objective genetic algorithm approach to the design of robust controllers with a gasification plant case study The authors are all masters in the field and clearly show the effectiveness of GA techniques Their presentation is your first opportunity to fully explore this cutting edge approach to robust optimal control system design and exploit its methods for your own applications

scientific way are far from being happy with this summary of their daily work even if further characterizations like High Performance or Engineering try to make things clearer usually with very modest success however Moreover to increase the unfortunate confusion of terms who knows the differences between Computational Science and Engineering as indicated in the title of the series these proceedings were given the honour to be published in and Scientific and Engineering Computing as chosen for the title of our book Actually though the protagonists of scientific computing persist in its independence as a scientific discipline and rightly so of course the ideas behind the term diverge wildly Consequently the variety of answers one can get to the question What is scientific computing is really impressive and ranges from the serious nothing else but numerical analysis up to the more mocking consuming as much CPU time as possible on the most powerful number crunchers accessible
