Adaptive Markets Andrew W. Lo, 2019-05-14 Half of all Americans have money in the stock market yet economists can't agree on whether investors and markets are rational and efficient as modern financial theory assumes or irrational and inefficient as behavioral economists believe and as financial bubbles crashes and crises suggest This is one of the biggest debates in economics and the value or futility of investment management and financial regulation hang on the outcome In this groundbreaking book Andrew Lo cuts through this debate with a new framework the Adaptive Markets Hypothesis in which rationality and irrationality coexist Drawing on psychology evolutionary biology neuroscience artificial intelligence and other fields Adaptive Markets shows that

the theory of marked efficiency isn't wrong but merely incomplete When markets are unstable investors react instinctively creating inefficiencies for others to exploit Lo's new paradigm explains how financial evolution shapes behavior and markets at the speed of thought a fact revealed by swings between stability and crisis profit and loss and innovation and regulation
