

Technical analysis using Japanese candlesticks

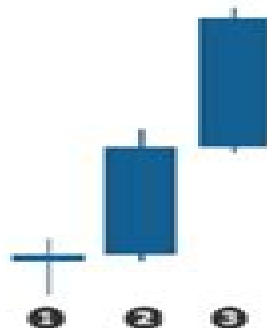

Japanese candlesticks can be used in conjunction to identify the current market conditions and the possible future price direction. This is done by using the information they present to show the balance between the buyers and sellers in the markets. This in turn allows you to identify the market sentiment.

Assessing the balance between the buyers and the sellers

The longer the body of a candlestick, the more momentum there is in that direction. What this means is:

- The **longer a bullish candlestick**, the **more buying pressure** there is in comparison to selling pressure for that period.
- The **longer a bearish candlestick**, the **more selling pressure** there is in comparison to buying pressure for that period.

Comparing candles in practice to assess the balance

The three candles to the right are all bullish candles; over the course of each of these time periods there were more buyers than sellers (the closing price was higher than the opening price).

Candle 2 is larger than candle 1. This indicates that there was more momentum to the upside in the second candle compared to the first. The buyers were able to push the price higher in the same amount of time as the first candle. Comparing the candles, it can be seen that the balance is shifting more and more in favour of the bulls.
