A Scientific Approach to Writing for Engineers and Scientists Robert E. Berger,2014-05-23 A SCIENTIFIC APPROACH TO WRITING Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e g proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good reasons can guide every writing decision This resource is also well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood

Berry, 2018 *Doing Time Writing Lives* offers a much needed analysis of the teaching of college writing in U S prisons a racialized space that despite housing more than 2.2 million people remains nearly invisible to the general public Through the examination of a college in prison program that promotes the belief that higher education in prison can reduce recidivism and improve life prospects for the incarcerated and their families author Patrick W Berry exposes not only incarcerated students hopes and dreams for their futures but also their anxieties about whether education will help them Beginning by exploring the need to move beyond narratives of hope when discussing literacy initiatives within prisons Berry then

illustrates how teachers and students frequently hold on to different beliefs about literacy and its power in the world After discussing the possibilities and limitations of professional writing courses in prisons the author argues that we need to pay greater attention to teachers and their motivations in prison education initiatives Finally he offers a case study of one formerly imprisoned student who uses writing in his current life and how this does and does not connect with what he learned in his prison education program Combining case studies and interviews with the author's own personal experiences teaching writing in prison *Doing Time Writing Lives* chronicles how incarcerated students attempt to write themselves back into a society that has erased their lived histories It challenges polarizing rhetoric often used to describe what literacy can and cannot deliver suggesting more nuanced and ethical ways of understanding literacy and possibility in an age of mass incarceration
