Technology and Society, second edition Deborah G. Johnson, Jameson M. Wetmore, 2021-08-24 Writings by thinkers ranging from Rokeya Sakhawat Hossain to Bruno Latour that focus on the interconnections of technology society and values Technological change does not happen in a vacuum decisions about which technologies to develop fund market and use engage ideas about values as well as calculations of costs and benefits In order to influence the development of technology for the better we must first understand how technology and society are inextricably bound together These writings by thinkers ranging from Bruno Latour to Francis Fukuyama help us do just that examining how people shape technology and how technology shapes people This second edition updates the original significantly offering twenty one new essays along with fifteen from the first edition The book first presents visions of the future that range from technological utopias to cautionary tales and then introduces several major STS theories It examines human and social values and how they are embedded in technological choices and explores the interesting and subtle complexities of the technology society relationship Remedying a gap in earlier theorizing in the field many of the texts illustrate how race and gender are intertwined with technology Finally the book offers a set of readings that focus on the sociotechnical challenges we face today treating topics

that include cybersecurity geoengineering and the myth of neutral technology **Technology and Society** Deborah G. Johnson, Jameson M. Marchant, Braden R. Allenby, Joseph R. Herkert, 2011-05-19 At the same time that the pace of science and technology has greatly accelerated in recent decades our legal and ethical oversight mechanisms have become bogged down and slower This book addresses the growing gap between the pace of science and technology and the lagging responsiveness of legal and ethical oversight society relies on to govern emerging technologies Whether it be biotechnology genetic testing nanotechnology synthetic biology computer privacy autonomous robotics or any of the other many emerging technologies new approaches are needed to ensure appropriate and timely regulatory responses This book

documents the problem and offers a toolbox of potential regulatory and governance approaches that might be used to ensure more responsive oversight

Technology, Society and Sustainability Lech W. Zacher, 2017-03-02 This collection is a multidisciplinary and multicultural contribution to the current sustainability discourse It is focused on two main dimensions of our world complexity and diversity Desirable and urgent transition of socio technological systems toward a sustainability trajectory of development requires a better understanding of technological trends and social transformations General advancement of technology does not produce identical changes in various societies differentiated economically and culturally Moreover the abilities to approach sustainable development change over time and space As a result there is a constant need for continuing research analyses and discussions concerning changing contexts and adequacy of strategies and policies Authors from twelve countries and of different academic and cultural settings present their insights analyses and recommendations The collection is focused both on contexts and on activities leading to sustainable trajectories in various domains of economy and social life Continuing research and discussion is needed to better understand these challenges and to prepare the appropriate strategies and solutions Development of socio technological systems is nowadays very complex moreover the world we live in is extremely diverse Therefore sustainability discourse must be ongoing introducing new ideas concepts theories evidence and experience by various parties academics professionals and practitioners

Producing Power Sonja D. Schmid, 2015-02-06 An examination of how the technical choices social hierarchies economic structures and political dynamics shaped the Soviet nuclear industry leading up to Chernobyl The Chernobyl disaster has been variously ascribed to human error reactor design flaws and industry mismanagement Six former Chernobyl employees were convicted of criminal negligence they defended themselves by pointing to reactor design issues Other observers blamed the Soviet style of ideologically driven economic and industrial management In *Producing Power* Sonja Schmid draws on interviews with veterans of the Soviet nuclear industry and extensive research in Russian archives as she examines these alternate accounts Rather than pursue one definitive explanation she investigates how each of these narratives makes sense in its own way and demonstrates that each implies adherence to a particular set of ideas about high risk technologies human machine interactions organizational methods for ensuring safety and productivity and even about the legitimacy of the Soviet state She also shows how these attitudes shaped and were shaped by the Soviet nuclear industry from its very beginnings Schmid explains that Soviet experts established nuclear power as a driving force of social not just technical progress She examines the Soviet nuclear industry's dual origins in weapons and electrification programs and she traces the emergence of nuclear power experts as a professional community Schmid also fundamentally reassesses the design choices for nuclear power reactors in the shadow of the Cold War's arms race Schmid's account helps us understand how and why a complex sociotechnical system broke down Chernobyl while unique and specific to the Soviet experience can also provide valuable lessons for contemporary nuclear projects

Developer's Dilemma Casey O'Donnell, 2014-11-21 Step inside the shoes of

video game creators in this fascinating look at game development and how it can inform our understanding of work Rank and file game developers bring videogames from concept to product and yet their work is almost invisible hidden behind the famous names of publishers executives or console manufacturers In this book Casey O Donnell examines the creative collaborative practice of typical game developers His investigation of why game developers work the way they do sheds light on our understanding of work the organization of work and the market forces that shape and are shaped by media industries O Donnell shows that the ability to play with the underlying systems technical conceptual and social is at the core of creative and collaborative practice which is central to the New Economy When access to underlying systems is undermined so too is creative collaborative process Drawing on extensive fieldwork in game studios in the United States and India O Donnell stakes out new territory empirically conceptually and methodologically Mimicking the structure of videogames the book is divided into worlds within which are levels and each world ends with a boss fight a rant about lessons learned and tools mastered O Donnell describes the process of videogame development from pre production through production considering such aspects as experimental systems socially mandatory overtime and the perpetual startup machine that exhausts young initially enthusiastic workers He links work practice to broader systems of publishing manufacturing and distribution introduces the concept of a privileged actor intra internetwork and describes patent and copyright enforcement by industry and the state

Power Lines Jennifer L. Lieberman, 2017-07-14 How electricity became a metaphor for modernity in the United States inspiring authors from Mark Twain to Ralph Ellison At the turn of the twentieth century electricity emerged as a metaphor for modernity Writers from Mark Twain to Ralph Ellison grappled with the idea of electricity as both life force illumination and death spark electrocution The idea that electrification created exclusively modern experiences took hold of Americans imaginations whether they welcomed or feared its adoption In *Power Lines* Jennifer Lieberman examines the apparently incompatible notions of electricity that coexisted in the American imagination tracing how electricity became a common though multifarious symbol for modern life Lieberman examines a series of moments of technical change when electricity accrued new social meanings plotting both power lines and the power of narrative lines in American life and literature While discussing the social construction of electrical systems she offers a new interpretation of Twain's use of electricity as an organizing metaphor in *A Connecticut Yankee in King Arthur's Court* describes the rhetoric surrounding the invention of electric execution analyzes Charlotte Perkins Gilman's call for human connection in her utopian writing and in her little known *Human Work* considers the theme of electrical interconnection in Jack London's work and shows how Ralph Ellison and Louis Mumford continued the literary tradition of electrical metaphor Electrical power was a distinctive concept in American literary cultural and technological histories For this reason narratives about electricity were particularly evocative Bridging the realistic and the romantic the historical and the fantastic these stories guide us to ask new questions about our enduring fascination with electricity and all it came to represent

Environmental Realism Kristan

Cockerill, Melanie Armstrong, Jennifer Richter, Jordan G. Okie, 2017-03-29 This interdisciplinary book challenges current approaches to environmental problems that perpetuate flawed but deeply embedded cultural beliefs about the role of science and technology in society The authors elucidate and interrogate a cultural history of solutionism that typifies expectations that science can and should reduce risk to people and property by containing and controlling biophysical phenomena Using historical analysis eco evolutionary principles and case studies on floods radioactive waste and epidemics the authors show that perceived solutions to environmental problems generate new problems leading to problem solution cycles of increasing scope and complexity The authors encourage readers to challenge the ideology of solutionism by considering the potential of language social action and new paradigms of sustainability to shape management systems This book will appeal to scholars in multi and interdisciplinary fields such as Environment Studies Environmental Science Environmental Policy and Science Technology and Society Studies

European Objects Brice Laurent, 2022-02-01 How interventions based on objects including chemicals financial products and consumer goods offer a path to rethink European integration Interventions based on objects Brice Laurent claims have become a dominant path for European policy making In European Objects Laurent analyzes the political consequences of these interventions and their democratization He uses the term European objects to describe technical entities that are regulated and thereby transformed by European policies To uncover the bureaucratic and regulatory intricacies of European governance Laurent focuses on a series of these objects including food products chemicals financial products consumer goods drinking water and occupational environments Laurent argues that taking European objects seriously offers a way to rephrase the dreams of harmonization and eventually rethink the constitutional strength of European integration Laurent doesn't just clarify how European regulation works but also explores ways to realize long term objectives for European integration such as a harmonized market or an objective expertise Regulation is best understood as regulatory machinery bringing together various types of legal constraints material interventions on objects and the imagining of desirable futures Analyzing European objects enables Laurent to explore what regulation has become after years of evolution have made it a central component of the European policy world He offers practical illustrations of how the regulatory machinery functions today If Europe succeeds at reinventing the terms of its legitimacy with objects that matter for the European public it will provide a telling demonstration that the opposition of expertise and populism is not the unavoidable fate of liberal democracies

Mapping Israel, Mapping Palestine Jess Bier, 2017-06-30 Digital practices in social and political landscapes Why two researchers can look at the same feature and see different things Maps are widely believed to be objective and data rich computer made maps are iconic examples of digital knowledge It is often claimed that digital maps and rational boundaries can solve political conflict But in Mapping Israel Mapping Palestine Jess Bier challenges the view that digital maps are universal and value free She examines the ways that maps are made in Palestine and Israel to show how social and political landscapes shape the practice of science and

technology How can two scientific cartographers look at the same geographic feature and see fundamentally different things In part Bier argues because knowledge about the Israeli military occupation is shaped by the occupation itself Ongoing injustices including checkpoints roadblocks and summary arrests mean that Palestinian and Israeli cartographers have different experiences of the landscape Palestinian forms of empirical knowledge including maps continue to be discounted Bier examines three representative cases of population governance and urban maps She analyzes Israeli population maps from 1967 to 1995 when Palestinian areas were left blank Palestinian state maps of the late 1990s and early 2000s which were influenced by Israeli raids on Palestinian offices and the legacy of British colonial maps and urban maps after the Second Intifada which show how segregated observers produce dramatically different maps of the same area The geographic production of knowledge including what and who are considered scientifically legitimate can change across space and time Bier argues that greater attention to these changes and to related issues of power will open up more heterogeneous ways of engaging with the world

The Squares Cyrus C. M. Mody, 2022-07-12

When ungroovy scientists did groovy science how non activist scientists and engineers adapted their work to a rapidly changing social and political landscape In *The Squares* Cyrus Mody shows how between the late 1960s and the early 1980s some scientists and engineers who did not consider themselves activists New Leftists or members of the

counterculture accommodated their work to the rapidly changing social and political landscape of the time These square scientists Mody shows began to do many of the things that the counterculture urged turn away from military industrial funding become more interdisciplinary and focus their research on solving problems of civil society During the period Mody calls the long 1970s ungroovy scientists were doing groovy science Mody offers a series of case studies of some of these collective efforts by non activist scientists to use their technical knowledge for the good of society He considers the region around Santa Barbara and the interplay of public universities think tanks established firms new companies philanthropies and social movement organizations He looks at Stanford University s transition from Cold War science to commercialized technoscience NASA s search for a post Apollo mission the unsuccessful foray into solar energy by Nobel laureate Jack Kilby the civilianization of the US semiconductor industry and systems engineer Arthur D Hall s ill fated promotion of automated agriculture

Sustainable Food Futures Jessica Duncan,Megan Bailey,2017-08-04 Securing sustainable food for everyone is one of the world s most pressing challenges but research policy and programmes remain fragmented and effective solutions have been slow to emerge This book takes on these challenges by proposing a range of solutions that can advance pathways towards sustainable food futures Complete with recipes this book is structured so that readers are taken in a logical progression through discussions of solutions highlighting the need to recognise the importance of place and the importance of participation and to challenge dominant descriptions of markets through to re designing food systems The solutions presented in this book are based on real world cases but discussions remain deliberately broad to encourage thinking in new ways Cases are drawn from Africa Asia Europe and North and South America The book is of relevance to those interested in sustainable food futures and can serve as a supplementary textbook for a wide range of courses in food studies and related disciplines

Low Power to the People Christina Dunbar-Hester,2014-11-07 The United States ushered in a new era of small scale broadcasting in 2000 when it began issuing low power FM LPFM licenses for noncommercial radio stations around the country Over the next decade several hundred of these newly created low wattage stations took to the airwaves This book describes the practices of an activist organization focused on LPFM during this era Publisher s description

Cyberspaces and Global Affairs Sean S. Costigan,Jake Perry,2016-05-13 From the Facebook revolutions in the Arab world to the use of social networking in the aftermath of disasters in Japan and Haiti to the spread of mobile telephony throughout the developing world all of these developments are part of how information and communication technologies are altering global affairs With the rise of the social web and applications like Facebook YouTube and Twitter scholars and practitioners of international affairs are adapting to this new information space across a wide scale of issue areas In conflict resolution dialogues and communication are taking the form of open social networks while in the legal realm where cyberspace is largely lawless space states are stepping up policing efforts to combat online criminality and hackers are finding new ways around increasingly sophisticated censorship Militaries are moving to deeply incorporate information

technologies into their doctrines and protesters are developing innovative uses of technology to keep one step ahead of the authorities. The essays and topical cases in this book explore such issues as networks and networked thinking, information ownership, censorship, neutrality, cyberwars, humanitarian needs, terrorism, privacy, and rebellion, giving a comprehensive overview of the core issues in the field complemented by real world examples.

Multiple Imaginaries of the Fossil Fuel Free Future Amelia Mutter, 2020-02-03

I kvattnet av klimatkrisen har det blivit allt tydligare att det fossilbaserade transportsystemet måste genomgå en global omvandling. Många alternativ för förnyelsebara drivmedel har förslagits alla omgivna av förrestlningar om hur dessa tekniker kommer att bidra till en bättre framtid. Dessa förrestlningar påverkar utvecklingen eftersom implementeringen av varje alternativ teknik kräver uppbyggnad av mångfaldiga socio tekniska ensembler som stöder dess användning. Som ett resultat av detta är det troligt att processen för att ersätta fossila bränslen med dessa förnybara alternativ kommer bli komplex. Avhandlingen betraktar uppkomsten av två av dessa förrestlningar om förnybara bränslen och studerar visioner om biogas och el i ett svenskt sammanhang. Biogas har en lång historia som transportbränsle i Sverige där även om den utgör en liten andel av den totala bränsleanvändningen utgör den ändå grunden för många kommunala kollektivtrafiksystem. Elektriska fordon har blivit alltmer attraktiva när fler aktörer anammar en förrestlning som ser en framtid där fordon är delade, autonoma och elektriska. Denna interaktion exemplifieras i kollektivtrafik i städer eftersom många kommuner börjar implementera elbussar i ett försök att öka energieffektiviteten och minska föroreningarna. Denna avhandling följer tre fallstudier där förrestlningarna om biogas och elfordon samverkar i kollektivtrafik i städerna Linköping respektive Malmö samt en analys av det omfattande nationella policydokumentet Fossilfrihet på väg. Avhandlingen bidrar till en bredare förståelse för hur visioner kan påverka utvecklingen och förändring av transportalternativ inom den bredare omställningen till en fossilfri framtid.

In the wake of the climate crisis it has become increasingly evident that the fossil fuel based transport system must undergo a global transformation. Numerous renewable fuel alternatives have been suggested accompanied by imaginaries of how these technologies will contribute to a better future. These imaginaries have a wide ranging impact because the implementation of each alternative technology will require the build up of multifarious socio technical ensembles that support their use. As a result replacing fossil fuels with these renewable alternatives is likely to be a complex process. This dissertation considers the emergence of two such visions of renewable fuels studying imaginaries of biogas and electricity in the Swedish context. Biogas has a long history of use as a transport fuel in Sweden where although it makes up a small percentage of total fuel use it also forms the basis of numerous municipal public transport systems. Meanwhile electric vehicles have become increasingly attractive as more actors subscribe to an imaginary that sees the future of vehicles as shared, autonomous and electric. This interaction is exemplified in urban public transportation as many municipalities begin to implement electric buses in an attempt to increase energy efficiency and reduce pollution. This thesis follows three case studies where the imaginaries of biogas and electric vehicles interact with urban public transport in the

municipalities of Linköping and Malmö and analysis of a comprehensive national policy document Fossil fuel freedom on the road It contributes to a wider understanding of how visions can influence obduracy and change of transport alternatives within the wider transformation to a fossil fuel free future
