Council of Stockholm the Swedish Aviation Administration the Swedish National Road Administration the Swedish Post the Swedish State Railways and Telia AB They have all served as joint sponsors and hosts for the Course In the year 1993 the Course also was sponsored by the Swedish Transport and Communications Research Board All these organizations have supported the publication of a series of key lectures from the Course to be released as a single volume entitled Networks in Action It is the ambition of the Foundation to create continuity in its activities for the future The board has proposed to its principals to take a decision in this direction It is my expectation that this will be the case for the Networks Course from 1995 This book will then serve as a basic reference for use in an era when the topic of Communication Networks will be included on a permanent basis in the Summer University s agenda

Management in Action Remko Helms, Jocelyn Cranefield, Jurriaan van Reijssen, 2017-02-23 Knowledge management KM is about managing the lifecycle of knowledge consisting of creating storing sharing and applying knowledge Two main approaches towards KM are codification and personalization The first focuses on capturing knowledge using technology and the latter on the process of socializing for sharing and creating knowledge Social media are becoming very popular as individuals and also organizations learn how to use it The primary applications of social media in a business context are marketing and recruitment But there is also a huge potential for knowledge management in these organizations For example wikis can be used to collect organizational knowledge and social networking tools which leads to exchanging new ideas and innovation The interesting part of social media is that by using them one immediately starts to generate content that can be useful for the organization Hence they naturally combine the codification and personalisation approaches to KM This book aims to provide an overview of new and innovative applications of social media and to report challenges that need to be solved One example is the watering down of knowledge as a result of the use of organizational social media Von Krogh 2012

This book aims to briefly portray a new interpretation of organizational culture varying from the profusion of literature in the following ways: it attempts to include how cultures are created organically or through consistent planning and action in different organizations such as education, business, and health, focusing more on change, innovation, and learning opportunities. It also aims to provide leaders with experiences and reflections on how to initiate an organizational culture change. Finally, this book is expected to extend new perspectives and practices for both potential and actual managers of organizations contributing to the current debate on how to transform organizations into innovative and learning cultures.

The Internet as Second Action Space

Aharon Kellerman, 2014-07-11. One of the most significant and important advancements in information and communication technology over the past 20 years is the introduction and expansion of the Internet. Now almost universally available, the Internet brings us email, global voice, and video communications; research repositories, reference libraries, and almost unlimited opportunities for daily activities. Bridging geographical distances in unprecedented ways, the Internet has impacted all aspects of our daily lives, from facilitating the running of businesses to the attainment of services and keeping in touch with friends and family. Accessible at any time and for many of us from our mobile phones, the Internet has opened up a world of knowledge and communication platforms that we cannot now imagine living without. This book explores the concept that the Internet has become a second action space for individuals. Coexisting with traditional and obvious real space, the Internet serves as a novel spatial platform and action space to its subscribers all over the world. Kellerman expertly discusses this notion and examines the practical integration of cyberspace with real space. Part I examines the Internet as a platform for action and presents its relations with physical space concerning a range of uses and applications which were traditionally performed in physical space only. It discusses the idea that the Internet has become a second space and explores theoretical perspectives surrounding this notion. The Internet has undeniably made humankind more efficient and connected. Part II explores the Internet as an action space for human life, considering basic human needs, curiosity, identity, and social relations. It further considers instances whereby use and application of the Internet cannot be fully performed in real space, mainly regarding people's presentation of identity. Part III explores daily actions over the Internet such as work, shopping, banking, and social interactions. Kellerman also briefly touches on the darker aspects that the expansion of the Internet has made possible, including its role in fraud and other crimes. The concluding chapter discusses people living across the two spaces and identifies potential future developments. *The Internet as Second Action Space* will appeal to students across the social sciences, in particular those studying Geography, Sociology, Media Studies, Internet Studies, Business, and related disciplines.
