**OECD Digital Education Outlook 2021 Pushing the Frontiers with Artificial Intelligence, Blockchain and Robots** OECD, 2021-06-08 How might digital technology and notably smart technologies based on artificial intelligence AI learning analytics robotics and others transform education This book explores such question It focuses on how smart technologies currently change education in the classroom and the management of educational organisations and systems

**The Technology of Binaural Understanding** Jens Blauert, Jonas Braasch, 2020-08-12 Sound devoid of meaning would not matter to us It is the information sound conveys that helps the brain to understand its environment Sound and its underlying meaning are always associated with time and space There is no sound without spatial properties and the brain always organizes this information within a temporal spatial framework This book is devoted to understanding the importance of meaning for spatial and related further aspects of hearing including cross modal inference People when exposed to acoustic stimuli do not react directly to what they hear but rather to what they hear means to them This semiotic maxim may not always apply for instance when the reactions are reflexive But where it does apply it poses a major challenge to the builders of models of the auditory system Take for example an auditory model that is meant to be implemented on a robotic agent for autonomous search rescue actions Or think of a system that can perform judgments on the sound quality of multimedia reproduction systems It becomes immediately clear that such a system needs Cognitive capabilities including substantial inherent knowledge The ability to integrate information across different sensory modalities To realize these functions the auditory system provides a pair of sensory organs the two ears and the means to perform adequate preprocessing of the signals provided by the ears This is realized in the subcortical parts of the auditory system In the title of a prior book the term Binaural Listening is used to indicate a focus on sub cortical functions Psychoacoustics and auditory signal processing contribute substantially to this area The preprocessed signals are then forwarded to the cortical parts of the auditory system where among other things recognition classification localization scene analysis assignment of meaning quality assessment and action planning take place Also information from different sensory modalities is integrated at this level Between sub cortical and cortical regions of the auditory system numerous feedback loops exist that ultimately support the high complexity and plasticity of the auditory system The current book concentrates on these cognitive functions Instead of processing signals processing symbols is now the predominant modeling task Substantial contributions to the field draw upon the knowledge acquired by cognitive psychology The keyword Binaural Understanding in the book title characterizes this shift Both books The Technology of Binaural Listening and the current one have been stimulated and supported by AABBA an open research group devoted to the development and application of models of binaural hearing The current book is dedicated to technologies that help explain facilitate apply and support

various aspects of binaural understanding It is organized into five parts each containing three to six chapters in order to provide a comprehensive overview of this emerging area Each chapter was thoroughly reviewed by at least two anonymous external experts The first part deals with the psychophysical and physiological effects of Forming and Interpreting Aural Objects as well as the underlying models The fundamental concepts of reflexive and reflective auditory feedback are introduced Mechanisms of binaural attention and attention switching are covered as well as how auditory Gestalt rules facilitate binaural understanding A general blackboard architecture is introduced as an example of how machines can learn to form and interpret aural objects to simulate human cognitive listening The second part Configuring and Understanding Aural Space focuses on the human understanding of complex three dimensional environments covering the psychological and biological fundamentals of auditory space formation This part further addresses the human mechanisms used to process information and interact in complex reverberant environments such as concert halls and forests and additionally examines how the auditory system can learn to understand and adapt to these environments The third part is dedicated to Processing Cross Modal Inference and highlights the fundamental human mechanisms used to integrate auditory cues with cues from other modalities to localize and form perceptual objects This part also provides a general framework for understanding how complex multimodal scenes can be simulated and rendered The fourth part Evaluating Aural scene Quality and Speech Understanding focuses on the object forming aspects of binaural listening and understanding It addresses cognitive mechanisms involved in both the understanding of speech and the processing of nonverbal information such as Sound Quality and Quality of Experience The aesthetic judgment of rooms is also discussed in this context Models that simulate underlying human processes and performance are covered in addition to techniques for rendering virtual environments that can then be used to test these models The fifth part deals with the Application of Cognitive Mechanisms to Audio Technology It highlights how cognitive mechanisms can be utilized to create spatial auditory illusions using binaural and other 3D audio technologies Further it covers how cognitive binaural technologies can be applied to improve human performance in auditory displays and to develop new auditory technologies for interactive robots The book concludes with the application of cognitive binaural technologies to the next generation of hearing aids

**The Immersive Enclosure** Paul Roquet, 2022-05-24 Winner 2023 Lewis Mumford Award for Outstanding Scholarship in the Ecology of Technics Media Ecology Association Although virtual reality promises to immerse a person in another world its true power lies in its ability to sever a person's spatial situatedness in this one This is especially clear in Japan where the VR headset has been embraced as a way to block off existing social environments and reroute perception into more malleable virtual platforms Is immersion just another name for enclosure In this groundbreaking analysis of virtual reality Paul Roquet uncovers how the technology is reshaping the politics of labor gender home and nation He examines how VR in Japan diverged from American militarism and techno utopian visions and became a tool for renegotiating personal space Individuals turned to the VR headset to immerse themselves in three

dimensional worlds drawn from manga video games and genre literature The Japanese government promised VR operated robots would enable a new era of remote work targeting those who could not otherwise leave home Middle aged men and corporate brands used VR to reimagine themselves through the virtual bodies of anime styled teenage girls At a time when digital platforms continue to encroach on everyday life The Immersive Enclosure takes a critical look at these attempts to jettison existing social realities and offers a bold new approach for understanding the media environments to come

**Telecommunication, Teleimmersion, and Telexistence II** Susumu Tachi, 2005 Summary Telexistence is the concept of overcoming limitations of time and space by presenting a sensation of existence in a virtual sense Teleimmersion and telexistence connect the space that we live in or that we exist in Technology based on this concept enables users to meet and talk to one another as if they share the same space and time even if they are far apart from each other This is the goal of the development of mutual telexistence communication systems as a natural progression from the telephone to the telexistence videophone One of the highlights of this publication is the section on TELESAR TELEXistence Surrogate Anthropomorphic Robot which is an anthropomorphic robot controlled by a human operator at a remote site with a sensation of presence The robot is coated with retro reflective material so that a person wearing an HMP Head Mounted Projector sees the telexisting operator instead of the robot This book focuses on the present status and future prospects of this emerging technology of teleimmersion and telexistence and reports on recent results *Perspectives de l'OCDE sur l'éducation numérique 2021 Repousser les frontières avec l'IA, la blockchain et les robots* OECD, 2022-12-09 De quelle manière les technologies numériques et en particulier les technologies intelligentes utilisant l'intelligence artificielle IA l'analyse des données de l'apprentissage la robotique et autres peuvent-elles transformer l'éducation Ce livre explore cette question **Advances in Artificial Reality and Tele-Existence** Ronghua Liang, Zhigeng Pan, Adrian Cheok, Michael Haller, Rynson W.H.
