

Secant and Tangent Relationships

Tangent Theorem: The perpendicular (or segment, or ray) is perpendicular to the radius of the circle at tangency.

This theorem is often used to solve right triangle problems with circles.

Secant Theorem 1: If two chords intersect inside a circle, the products of the measures of the segments of the chords are equal.

$$TA \cdot TB = TC \cdot TD = 12 \cdot 16$$

$$TA = 12$$

$$TB = 16$$

$$TC = 10$$

$$TD = \underline{\hspace{2cm}}$$

Secant Theorem 2: If two secant segments are drawn to a circle from an exterior point outside the circle, the product of the measures of one secant segment and its external secant segment is equal to the product of the measures of the other secant segment and its external secant segment.

$$AP \cdot BP = AQ \cdot BQ = 12 \cdot 20 = 240$$

$$AP = 12$$

$$BP = 20$$

$$AQ = 10$$

$$BQ = \underline{\hspace{2cm}}$$

Engineering registration is accelerating at a pace unequalled since institution of registration laws in the 1920s and 1930s. This phenomenon is not due to an easing of entrance requirements since only vestiges of grand fathering and eminence exist in most states. Nor is it due to a lessening in the difficulty of the registration examinations. In fact it is generally agreed that the Engineering Fundamentals Examination has significantly increased in difficulty over the last fifteen years. Why then the increased interest in registration among practicing engineers? Historically the professional engineer has been in private practice offering consulting services directly to the public. Registration laws were passed to protect the public from incompetent untrained practitioners in any engineering area. However the registration laws go beyond establishing an individual's credentials. One reason for the new interest in engineering registration is the proliferation of new activity areas such as pollution control and energy conservation where the public is keenly aware of and insistent upon quality technological inputs. *Precalculus* Cynthia Y.
