*How to Create and Use Rubrics for Formative Assessment and Grading* Susan M. Brookhart, 2013-01-11 What is a rubric A rubric is a coherent set of criteria for student work that describes levels of performance quality Sounds simple enough right Unfortunately rubrics are commonly misunderstood and misused The good news is that when rubrics are created and used correctly they are strong tools that support and enhance classroom instruction and student learning In this comprehensive guide author Susan M Brookhart identifies two essential components of effective rubrics 1 criteria that relate to the learning not the tasks that students are being asked to demonstrate and 2 clear descriptions of performance across a continuum of quality She outlines the difference between various kinds of rubrics for example general versus task specific

and analytic versus holistic explains when using each type of rubric is appropriate and highlights examples from all grade levels and assorted content areas In addition Brookhart addresses Common misconceptions about rubrics Important differences between rubrics and other assessment tools such as checklists and rating scales and when such alternatives can be useful and How to use rubrics for formative assessment and grading including standards based grading and report card grades Intended for educators who are already familiar with rubrics as well as those who are not this book is a complete resource for writing effective rubrics and for choosing wisely from among the many rubrics that are available on the Internet and from other sources And it makes the case that rubrics when used appropriately can improve outcomes by helping teachers teach and helping students learn

**Seeing Students Learn Science** National Academies of

Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on Science Education, Heidi Schweingruber, Alexandra Beatty, 2017-04-24 Science educators in the United States are adapting to a new vision of how students learn science Children are natural explorers and their observations and intuitions about the world around them are the foundation for science learning Unfortunately the way science has been taught in the United States has not always taken advantage of those attributes Some students who successfully complete their K 12 science classes have not really had the chance to do science for themselves in ways that harness their natural curiosity and understanding of the world around them The introduction of the Next Generation Science Standards led many states schools and districts to change curricula instruction and professional development to align with the standards Therefore existing assessments whatever their purpose cannot be used to measure the full range of activities and interactions happening in science classrooms that have adapted to these ideas because they were not designed to do so Seeing Students Learn Science is meant to help educators improve their understanding of how students learn science and guide the adaptation of their instruction and approach to assessment It includes examples of innovative assessment formats ways to embed assessments in engaging classroom activities and ideas for interpreting and using novel kinds of assessment information It provides ideas and questions educators can use to reflect on what they can adapt right away and what they can work toward more gradually
