Critical Mathematics Education Paul Ernest, Bharath Sriraman, Nuala Ernest, 2016-01-01 Mathematics is traditionally seen as the most neutral of disciplines the furthest removed from the arguments and controversy of politics and social life However critical mathematics challenges these assumptions and actively attacks the idea that mathematics is pure objective

and value neutral It argues that history society and politics have shaped mathematics not only through its applications and uses but also through molding its concepts methods and even mathematical truth and proof the very means of establishing truth Critical mathematics education also attacks the neutrality of the teaching and learning of mathematics showing how these are value laden activities indissolubly linked to social and political life Instead it argues that the values of openness dialogicality criticality towards received opinion empowerment of the learner and social political engagement and citizenship are necessary dimensions of the teaching and learning of mathematics if it is to contribute towards democracy and social justice This book draws together critical theoretic contributions on mathematics and mathematics education from leading researchers in the field Recurring themes include The natures of mathematics and critical mathematics education issues of epistemology and ethics Ideology the hegemony of mathematics ethnomathematics and real life education Capitalism globalization politics social class habitus citizenship and equity The book demonstrates the links between these themes and the discipline of mathematics and its critical teaching and learning The outcome is a groundbreaking collection unified by a shared concern with critical perspectives of mathematics and education and of the ways they impact on practice English
