*Integrating the Curriculum Through Active Processing* James Pelech, 2025-05-30 The purpose of the book is to present a different perspective on curricular theory This book extends knowledge in the Education fields of Curricular Theory and Learning it does this by directly blending the concepts of Active Processing and the Integrated Curriculum     Teaching and Applying Mathematical Modelling John Stephen Berry, 1984     *Teaching Secondary and Middle School Mathematics* Daniel J. Brahier, 2009 In this extensively revised third edition of *Teaching Secondary and Middle School Mathematics* scholar and classroom teacher Daniel Brahier presents concise current and meaningful descriptions of what it takes to be an effective teacher of mathematics With up to date research classroom tested teaching ideas and a vibrant writing style this book provides essential information on curriculum teaching and assessment issues related to middle secondary mathematics Every chapter includes a contextualizing introduction scenarios and dialogues for student reflection recommended resources for further study and closing activities and discussion questions to cement chapter concepts Jacket     *Student Empowerment in Higher Education. Reflecting on Teaching Practice and Learner Engagement* Anjoom A. Mukadam ,2020-05-04 Student Empowerment in Higher Education brings together the accumulated knowledge and experience of many accomplished teachers and students from higher education institutions around the world and has much to offer those who are engaged in higher education as students teachers or support staff The authors offer personal reflections in teaching learning mentoring assessment hands on activities course design and student identities in higher education across the globe supported by academic research and scholarship Readers are provided with a window into tried and tested empowering practices in varying contexts enabling them to see what works and what does not alongside the challenges and possibilities A distinctive feature of this book and its paramount strength is that it explores best practices in student empowerment whilst reflecting on

matters of teaching and learning that are familiar to students and teachers alike and also explores practices in a variety of disciplines. The intention of these volumes therefore is not only to inform readers about the diverse learning and teaching approaches of the authors but most importantly to facilitate processes of student empowerment and promote reflection on teaching and learning practices. In recent decades higher education policy discourse has persistently implied that a university education is delivered to students under the impersonal banner of the student experience. Not only does this commodify the diverse individual experiences of students into one marketable product it also creates false barriers and power dynamics between students and their teachers. In *Student Empowerment in Higher Education* the students and lecturers who collaborated to write this important volume have literally blown such misleading notions out of the window. I highly recommend each varied and autonomous chapter to learn what really inspires confidence and success in university students.

Professor Sarah Hayes, Professor of Higher Education Policy, University of Wolverhampton. The two volumes of *Student Empowerment in Higher Education* offer the reader rich and varied examples and understandings of student empowerment from around the world. The authors provide reflective accounts of learning and teaching from diverse perspectives and disciplines which focus on many different areas of practice in higher education. It is this variety that will appeal to many readers as the source of ideas and inspiration for numerous possible routes to empowerment. With many chapters co-authored by students and staff, the book models the collective responsibility students and staff have for enhancing student empowerment.

Dr Catherine Bovill, Senior Lecturer in Student Engagement, University of Edinburgh. Fulbright Scholar, Elon University, North Carolina, USA. Visiting Fellow, Knowledge Exchange, University of Winchester.

Lewy, 1991-04-10. The International Encyclopedia of Curriculum is a unique collection of analytical and empirical studies on curriculum-related issues. Its 280 articles, authored by experts from 22 countries, are grouped in two sections. The first, *Curriculum as a Domain of Enquiry*, contains articles dealing with general topics in this field. The second, *Specific Study Areas*, contains articles on more than 120 subjects currently taught in schools. It is the first attempt to provide in a single volume a comprehensive review of approaches and problems related to teaching traditional school subjects such as mathematics, history, and classical languages, as well as the innovative ones such as film studies, women's studies, communication skills, set theory in mathematics, and energy education. The book is an invaluable tool for educationists, educational administrators, supervisors, researchers, policy makers, and curriculum planners, and a source of information and inspiration for teachers and school-level curriculum coordinators.
