Nuclear Great Britain. Parliament. House of Commons. Energy and Climate Change Committee, 2013 Failure to build a new fleet of nuclear power stations in the UK could make it much more expensive to meet our climate change targets and Ministers must urgently develop a back up energy strategy The nuclear industry has outlined plans that would deliver 16GW new nuclear power stations by 2025 Although the Government and industry have learnt some important lessons from this process there are still a number of obstacles which could delay new build projects in the UK The Committee supports the Government's use of Contracts for Difference CfDs to help make new nuclear power stations easier to finance but are concerned at the lack of transparency around the price negotiations The new contracts must provide value for money for consumers and should not be offered at a price that is higher than other low carbon sources of energy such as offshore wind which is hoped to be around 100 MWh by 2020 Public attitudes have an important role to play in projects to build new nuclear power stations The Committee is concerned that local communities might not be able to take part in planning consultations on an equal footing with the project developers The report recommends that the Government should consider providing more support to local community groups so that they can engage better with the planning process The Government has plans to allow local authorities hosting renewable energy projects to retain business rates The report argues that this scheme should be extended to new nuclear projects too

Concrete Solutions 2011 Michael Grantham, Viktor Mechtcherine, Ulrich Schneck, 2011-09-08 The Concrete Solutions series of International Conferences on Concrete Repair began in 2003 with a conference held in St Malo France in association with INSA Rennes followed by the second conference in 2006 with INSA again at St Malo France and the third conference in 2009 in Padova and Venice in association with the University of Padova Now in 2011 the event is being held in Dresden in Germany and has brought together some 112 papers from 33 countries Whereas electrochemical repair tended to dominate the papers in earlier years new developments in structural strengthening with composites have been an increasingly important topic with a quarter of the papers now focusing on this area New techniques involving Near Surface Mounted NSM carbon fibre rods strain hardening composites and new techniques involving the well established carbon fibre and polyimide wrapping and strengthening systems are presented Seventeen papers concentrate on case studies which are all important in such conferences to learn about what works and what doesn't work on real structures Thirteen papers are devoted to new developments in Non Destructive Testing NDT Other topics include service life modelling fire damage surface protection methods and coatings patch repair general repair techniques and whole life costing This book is essential reading for anyone engaged in the concrete repair field from engineers to academics and students and also to clients who as the end user are ultimately responsible for funding these projects and making those difficult decisions about which system or method to use
