Lockett,2020-08-16 This book examines the mismatch between discrete programs which lie at the center of modern applied mathematics and the continuous space phenomena they simulate The author considers whether we can imagine continuous spaces of programs and asks what the structure of such spaces would be and how they would be constituted He proposes a functional analysis of program spaces focused through the lens of iterative optimization The author begins with the observation that optimization methods such as Genetic Algorithms Evolution Strategies and Particle Swarm Optimization can be analyzed as Estimation of Distributions Algorithms EDAs in that they can be formulated as conditional probability distributions The probabilities themselves are mathematical objects that can be compared and operated on and thus many methods in Evolutionary Computation can be placed in a shared vector space and analyzed using techniques of functional analysis The core ideas of this book expand from that concept eventually incorporating all iterative stochastic search methods including gradient based methods Inspired by work on Randomized Search Heuristics the author covers all iterative optimization methods and not just evolutionary methods The No Free Lunch Theorem is viewed as a useful introduction to the broader field of analysis that comes from developing a shared mathematical space for optimization algorithms The author brings in intuitions from several branches of mathematics such as topology probability theory and stochastic processes and provides substantial background material to make the work as self contained as possible The book will be valuable for researchers in the areas of global optimization machine learning evolutionary theory and control theory **Forecast** Mark Buchanan,2013-01-01 Positive feedback when A produces B which in turn produces even more A drives not only abrupt

climate changes but also disruptive events in economics and finance from asset bubbles to debt crises bank runs even corporate corruption But economists with few exceptions have ignored this reality for fifty years holding on to the unreasonable belief in the wisdom of the market It s past time to be asking how markets really work Can we replace economic magical thinking with a better means of predicting what the financial future holds in order to prepare for or even avoid the next extreme economic event Here physicist and acclaimed science writer Mark Buchanan answers these questions and more in a master lesson on a smarter economics which accepts that markets act much like weather Market instability is as natural and dangerous as a prairie twister With Buchanan s help perhaps we can better govern the markets and weather their storms

**The Science of Financial Market Trading** Don K. Mak, 2003 In this book Dr Mak views the financial market from a scientific perspective The book attempts to provide a realistic description of what the market is and how future research should be developed The market is a complex phenomenon and can be forecasted only with errors if that particular market can be forecasted at all The book reviews the scientific literatures on the financial market and describes mathematical procedures which demonstrate that some markets are non random How the markets are modeled phenomenologically and from first principle is explained It discusses indicators which are quite objective rather than price patterns which are rather subjective Similarities between indicators in market trading and operators in mathematics are noted and particularly between oscillator indicators and derivatives in Calculus It illustrates why some indicators e g Stochastics have limited usage Several new indicators are designed and tested on theoretical waveforms to check their validity and applicability The indicators have a minimal time lag which is significant for trading purposes Common market behaviors like divergences between price and momentum are explained A skipped convolution technique is introduced to allow traders to pick up market movements at an earlier time The market is treated as a nonlinear phenomenon Forecasting of when the market is going to turn is emphasized
