Inhaltsangabe Introduction The following paper will outline the suitability of Technical Analysis TA regarding selective chosen tools for performance increase versus the classic Buy and Hold Strategy BHS These two approaches beside the Fundamental Analysis FA are the foundations used by investors concerning their Investment strategy and differ substantially in their nature Thereby this dissertation will investigate whether the application of active TA is a productive approach yielding to favourable results and having the ability to outperform the passive BHS To achieve substantive results the comparisons of performances will be stretched to 21 years and are based on the following three indices which differ significantly concerning their location volume and importance Standard 200 days and 100 days Moving Average Convergence Divergence Bollinger Bands Oscillators Relative Strength Index Slow Stochastic Momentum TA can be divided into Chartism and the statistical based TA Although a clear demarcation between these groups is not given in reality as most proponents of TA combine both techniques The vast majority of this dissertation will only reflect the latter This can also be justified as Chartists predict future price developments based on trend lines patterns and formations Murphy 1999 states that all Chartists are Technical Analysts but not all Technical Analysts are Chartists Due to the lack of standardised price characteristics Chartism implies a high degree of subjectivity Therefore the absence of operational ability of this sub area would not lead to a feasible analysis concerning an increase in performance We maintain that financial markets are either moving in boom or bust cycles Bull or Bear Markets The classic BHS based on the Investment Legend Benjamin Graham has generated high profits in the Technical Indicators With Formula , Technical indicators can inform you about different aspects of the market such as trend volatility momentum market strength cycle and so on They are mathematical calculations that can be applied to a stock s price volume or even to another technical indicator The result is a value that is used to anticipate future changes in prices Indicators serve three broad functions to alert to confirm and to predict When choosing an indicator to use for analysis try to choose indicators that complement each other instead of those that generate the same signals such as Stochastics and RSI which are good for showing overbought and oversold levels For analyzing trends use trend following indicators like moving averages For trading ranges use oscillators like RSI There are 42 technical indicators

in this ebook with brief description and mathematical formula of each Finding potential stocks are easy using these indicators especially if you have charting software which allows you to create your own filters As always in technical analysis learning how to read indicators is more of an art than a science
