robustly applicable methods which nevertheless remain firmly anchored theoretically Bateman 2022b 64 For a productive handling of these issues disciplinary triangulation and finding a common language or metalanguage Maton newest results from data collection methods and multimodal corpus analyses that expand the current quantitative work by e g applying existing theories and methods to larger datasets or exploring the newest communication technologies We are particularly interested in seeing how works addressing these aspects contribute to finding ways of productive triangulation and integration for and within a meta methodology for multimodality research This Research Topic aims to bring together scholars from a variety of disciplines interested in multimodality research to review explore and advance the contributions that John Bateman as one of the key figures in multimodality research has made to both theory and method building as well as to the driving forward of multimodal empirical and corpus analyses We welcome contributions that for example critically address the theoretical and methodological advancements that John Bateman has made with regard to the notions of semiotic mode discourse semantics genre textuality etc apply one of the many approaches that John Bateman has developed for the empirical analysis of multimodal artefacts e g the GeM model for page based documents his work on multimodal film and audio visual analysis and the discourse semantics and or annotation approach to visual narratives to larger corpora or currently newly developing communicative situations expand on one of the abovementioned aspects with new ideas and insights from disciplines that have not yet been included in multimodality research
