Disorders The diagnosis management and clinical testing associated with old traditional and new endocrine disorders have seen numerous advances during the past 10 years since the publication of the previous edition of this bestselling resource Updating its classic predecessor in content and format **4D Modeling and Estimation of Respiratory Motion for Radiation Therapy** Jan Ehrhardt, Cristian Lorenz, 2013-05-30 Respiratory motion causes an important uncertainty in radiotherapy planning of the thorax and upper abdomen The main objective of radiation therapy is to eradicate or shrink tumor cells without damaging the surrounding tissue by delivering a high radiation dose to the tumor region and a dose as low as possible to healthy organ tissues Meeting this demand remains a challenge especially in case of lung tumors due to breathing induced tumor and organ motion where motion amplitudes can measure up to several centimeters Therefore modeling of respiratory motion has become increasingly important in radiation therapy With 4D imaging techniques spatiotemporal image sequences can be acquired to investigate dynamic processes in the patient's body Furthermore image registration enables the estimation of the breathing induced motion and the description of the temporal change in position and shape of the structures of interest by establishing the correspondence between images acquired at different phases of the breathing cycle In radiation therapy these motion estimations are used to define accurate treatment margins e.g. to calculate dose distributions and to develop prediction models for gated or robotic radiotherapy In this book the increasing role of image registration and motion estimation algorithms for the interpretation of complex 4D medical image sequences is illustrated Different 4D CT image acquisition techniques and conceptually different motion estimation algorithms are presented The clinical relevance is demonstrated by means of example applications which are related to the radiation therapy of thoracic and abdominal tumors The state of the art and perspectives are shown by an insight into the current field of research The book is addressed to biomedical engineers medical physicists researchers and physicians working in the fields of medical image analysis radiology and radiation therapy **Intracranial Pressure and Neuromonitoring XVII** Bart Depreitere, Geert Meyfroidt, Fabian Güiza, 2021-04-10 This book gathers the proceedings of the 17th International Conference on Intracranial Pressure and Neuromonitoring held in Leuven Belgium in September 2019 It provides an overview of the current understanding underlying research and future perspectives concerning pathophysiology biophysics monitoring and management in traumatic and non traumatic acute brain injury hydrocephalus and spinal cord injury including cerebrovascular autoregulation impairment in neurological as well as non neurological diseases The peer reviewed contributions were prepared by specialists in neurosurgery neurointensive care and neuroanesthesiology as well as prominent experts from the fields of physiology clinical and biomedical engineering mathematics and informatics The book continues the time honored tradition of publishing key presentations from the ICP Conferences in order to facilitate their dissemination within the clinical and research community **Subarachnoid Hemorrhage** Robert D. Martin, Warren Boling, Gang Chen, John H. Zhang, 2019-08-12 This book highlights the latest developments in acute and delayed

neurovascular injury studies including delayed cerebral vasospasm early brain injury micro circulation compromise spreading cortical depolarization neuroinflammation and long term cognitive dysfunctions after subarachnoid hemorrhage About 32 chapters cover original presentations from the 14th international conference on neurovascular events after subarachnoid hemorrhage held in Los Angeles in October 2017 Neurosurgeons neurologists and neuro ICU practitioners discuss clinical observations new pilot treatments clinical trials academic and industrial interactions including surgical and endovascular approaches brain injury monitoring new developments in brain imaging ICU management early brain injury scales and management counter cortical depolarization management and anti inflammation management In addition animal models used to study acute and delayed neurovascular events the basic mechanisms of vascular neuronal and CSF physiology new experimental treatment strategies new frontiers in the treatment of neurovascular injuries and new research directions are discussed
