Modelling Written Communication Deirdre Pratt, 2011-01-19 This book offers an alternative view to current postmodern approaches to composition It takes a critical realist stance to arrive at the essence of written communication with the aim of informing a practical application a computerised writing tutor Following Robert Franck s seminal work on modelling a theoretical model of writing was first formulated consisting of an architecture of functions which constitute the prerequisites for effective communication Next an applied model a composing algorithm with an input option was developed showing composing to be a systemic social process with intra and extra systemic variation The algorithm provided the design template for a writing tutor program which models for the learner both the systemic and the socially situated nature of writing This book establishes composing as a communicative interaction and shows the essential dynamism of writing while offering an exemplar of a systems approach to modelling in the social sciences
